Anthus petrosus

Annex I No International action plan No

Rock Pipit, *Anthus petrosus*, is a species of passerine bird in the wagtail and pipit family found in unvegetated or sparsely vegetated land ecosystems. It breeds only in Europe, where it occurs in coastal areas of the northwest and Fennoscandia. This species occupies exposed rocky sea coasts and islands with low vegetation. It occasionally breeds away from coast, such as on St. Kilda (western Scotland), or on islands in large inland lakes, such as in southern Sweden. It can also occur inland along estuaries and at various wetlands or along less rocky coasts, during migration and in winter (European Red List 2015).

Anthus petrosus has a breeding population size of 62200-77100 pairs and a breeding range size of 191000 square kilometres in the EU27. The breeding population trend in the EU27 is Decreasing in the short term and Unknown in the long term.

The EU population status for *Anthus petrosus* is Unknown, as the data reported were not sufficient to assess the population status of the species.

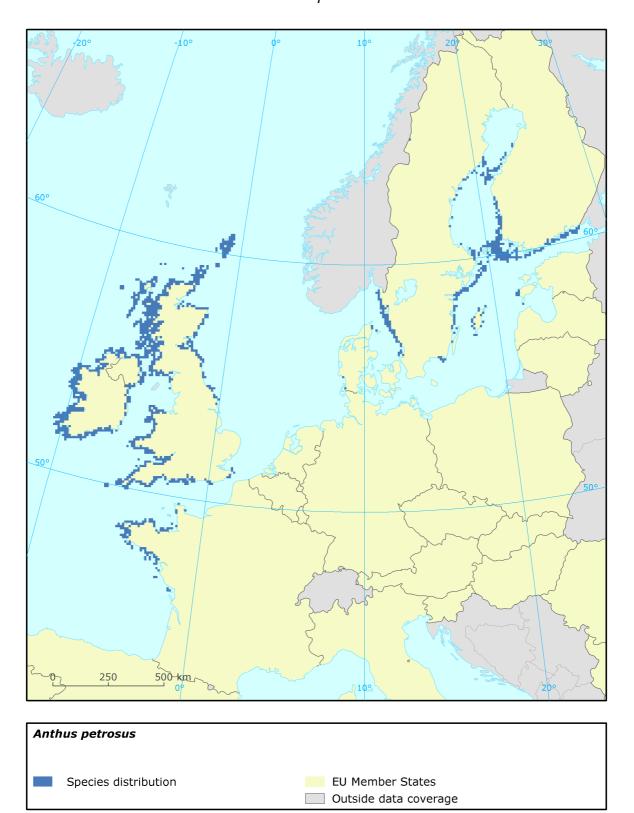

Anthus petrosus

Report under the Article 12 of the Birds Directive

Assessment of status at the European level

Breeding population size	Breeding population trend		Range	Breeding range trend		Winter	Winter population trend		Population
	Short term	Long term	area	Short term	Long term	population size	Short term	Long term	status
62200 - 77100 p	-	X	191000						Unknown

Anthus petrosus

Report under the Article 12 of the Birds Directive

Short-term winter population trend was not reported for this species.

This information is derived from the Member State national reports submitted to the European Commission under Article 12 of the Birds Directive in 2013 and covering the period 2008-2012. More detailed information, including the MS reports, is available at: http://bd.eionet.europa.eu/article12/summary?period=1&subject=A666.

Anthus petrosus

Report under the Article 12 of the Birds Directive

¹ Assessment of status at the European level: The EU assessments of birds population status was made by the European Red List of Birds Consortium (under contract with the European Commission)

The EU27 population trends were assessed using these categories: '+' Increasing, '0' Stable, 'F' Fluctuating, '-' Decreasing, 'xu' Uncertain and 'x' Unknown. The breeding population size is estimated in majority of the cases as 'p' number of pairs. Alternative population units used are: 'males' number of males, 'i' number of individuals, 'cmales' number of calling males and 'bfem' number of breeding females. The winter population size is estimated as number of individuals.

ⁱⁱSpecies trends at the Member State level: The percentage of the EU27 species population occurring in the Member States (% in EU27) is calculated based on the population size reported by the Member States.
