

## *Emberiza pusilla*

---

<b>Annex I</b>	No
<b>International action plan</b>	No

Little Bunting, *Emberiza pusilla*, is a species of passerine bird in the bunting family found in wetland and woodland and forest ecosystems.

*Emberiza pusilla* has a breeding population size of 13000-40500 pairs and a breeding range size of 50000 square kilometres in the EU27. The breeding population trend in the EU27 is Stable in the short term and Decreasing in the long term.

The EU population status of *Emberiza pusilla* was assessed as Depleted, because the EU27 population or range declined by at least 20% since 1980, but has no longer been declining since 2001.

## Assessment of status at the European level

Breeding population size	Breeding population trend		Range area	Breeding range trend		Winter population size	Winter population trend		Population status
	Short term	Long term		Short term	Long term		Short term	Long term	
13000 - 40500 p	0	-	50000						Depleted

See the endnotes for more information<sup>i</sup>

***Emberiza pusilla***  
Report under the Article 12 of the Birds Directive

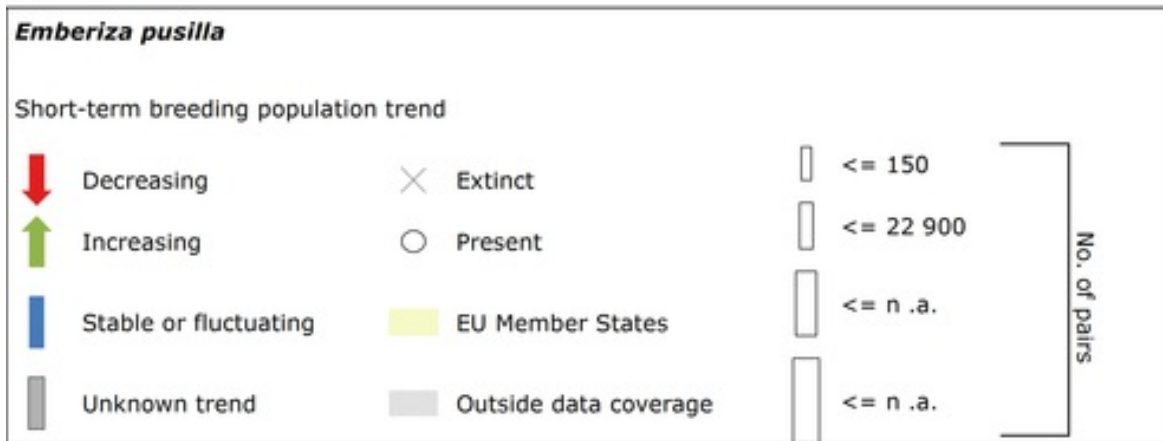

## Trends at the Member State level

MS/Ter.	% in EU27	Breeding population size	Breeding population trend		Range area	Breeding range trend		Winter population size	Winter population trend	
			Short term	Long term		Short term	Long term		Short term	Long term
FI	63.8	13000 - 40000 p	0	-	31900	x	-			
SE	36.2	50 - 430 p	x	x	18100	x	x			

See the endnotes for more information<sup>ii</sup>

***Emberiza pusilla***  
 Report under the Article 12 of the Birds Directive

## ***Emberiza pusilla***

*Report under the Article 12 of the Birds Directive*

*Short-term winter population trend was not reported for this species.*

This information is derived from the Member State national reports submitted to the European Commission under Article 12 of the Birds Directive in 2013 and covering the period 2008-2012. More detailed information, including the MS reports, is available at:  
<http://bd.eionet.europa.eu/article12/summary?period=1&subject=A380> .

<sup>i</sup> **Assessment of status at the European level:** The EU assessments of birds population status was made by the European Red List of Birds Consortium (under contract with the European Commission)

The EU27 population trends were assessed using these categories: '+' Increasing, '0' Stable, 'F' Fluctuating, '-' Decreasing, 'xu' Uncertain and 'x' Unknown. The breeding population size is estimated in majority of the cases as 'p' number of pairs. Alternative population units used are: 'males' number of males, 'i' number of individuals, 'cmales' number of calling males and 'bfem' number of breeding females. The winter population size is estimated as number of individuals.

<sup>ii</sup> **Species trends at the Member State level:** The percentage of the EU27 species population occurring in the Member States (% in EU27) is calculated based on the population size reported by the Member States.
