

Locustella fluviatilis

Annex I	No
International action plan	No

Eurasian River Warbler, *Locustella fluviatilis*, is a species of passerine bird in the warbler family found in wetland and river and lake ecosystems.

Locustella fluviatilis has a breeding population size of 178000-357000 pairs and a breeding range size of 933000 square kilometres in the EU27. The breeding population trend in the EU27 is Decreasing in the short term and Uncertain in the long term.

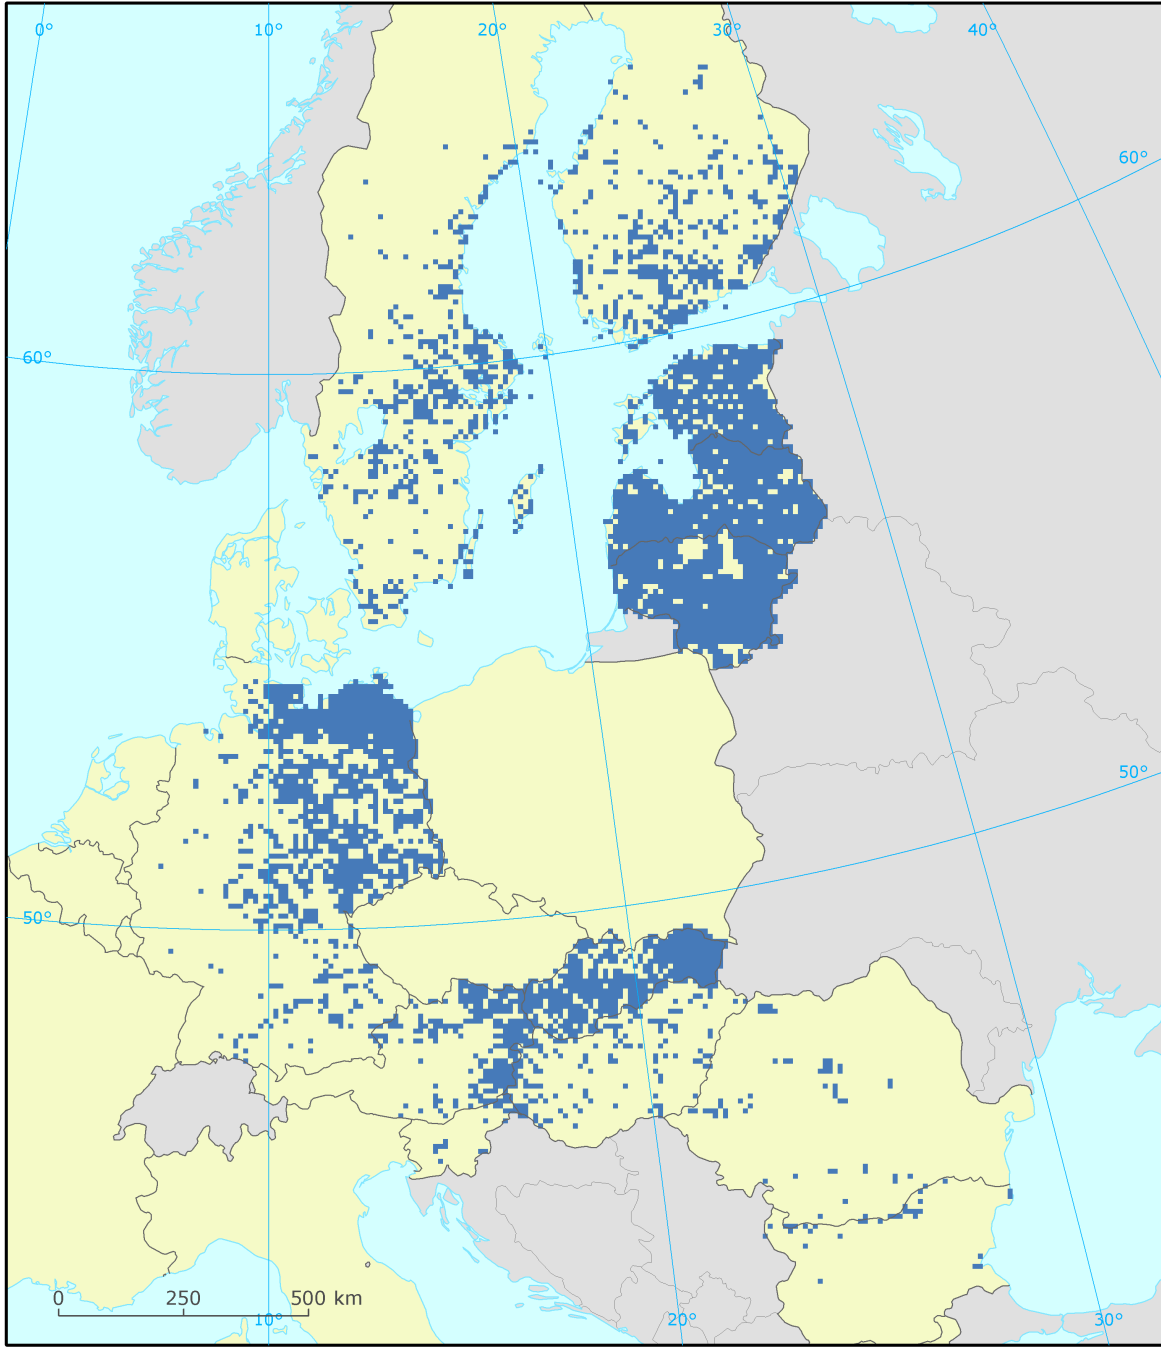

The EU population status of *Locustella fluviatilis* was assessed as Threatened, as the species meets one or more of the IUCN Red List criteria for threatened at the EU27 scale.

Assessment of status at the European level

Breeding population size	Breeding population trend		Range area	Breeding range trend		Winter population size	Winter population trend		Population status
	Short term	Long term		Short term	Long term		Short term	Long term	
178000 - 357000 p	-	u	933000						Threatened

Report under the Article 12 of the Birds Directive

Locustella fluviatilis

Short-term breeding population trend

	Decreasing		Extinct		<= 5 600	No. of pairs
	Increasing		Present		<= 11 700	
	Stable or fluctuating		EU Member States		<= 38 800	
	Unknown trend		Outside data coverage		<= 63 300	

Locustella fluviatilis

Report under the Article 12 of the Birds Directive

Short-term winter population trend was not reported for this species.

This information is derived from the Member State national reports submitted to the European Commission under Article 12 of the Birds Directive in 2013 and covering the period 2008-2012. More detailed information, including the MS reports, is available at:
<http://bd.eionet.europa.eu/article12/summary?period=1&subject=A291> .

ⁱ **Assessment of status at the European level:** The EU assessments of birds population status was made by the European Red List of Birds Consortium (under contract with the European Commission)

The EU27 population trends were assessed using these categories: '+' Increasing, '0' Stable, 'F' Fluctuating, '-' Decreasing, 'xu' Uncertain and 'x' Unknown. The breeding population size is estimated in majority of the cases as 'p' number of pairs. Alternative population units used are: 'males' number of males, 'i' number of individuals, 'cmales' number of calling males and 'bfem' number of breeding females. The winter population size is estimated as number of individuals.

ⁱⁱ **Species trends at the Member State level:** The percentage of the EU27 species population occurring in the Member States (% in EU27) is calculated based on the population size reported by the Member States.
