# Report under the Article 12 of the Birds Directive Period 2008-2012

### **European Environment Agency** European Topic Centre on Biological Diversity

## Netta rufina

Annex I No International action plan No

Red-crested Pochard, *Netta rufina*, is a species of diving duck found in wetland and river and lake ecosystems.

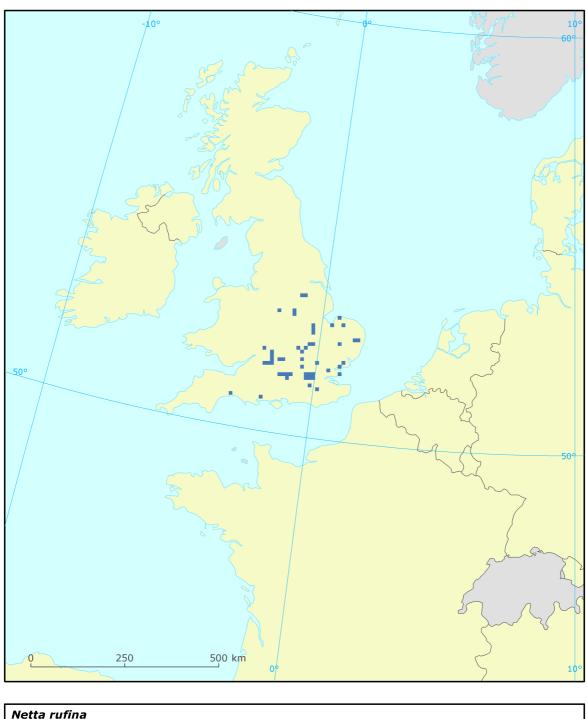

Netta rufina has a breeding population size of 10500-14100 pairs and a breeding range size of 164000 square kilometres in the EU27. The breeding population trend in the EU27 is Increasing in the short term and Increasing in the long term. Netta rufina has a winter population size of 36300-57000 individuals in the EU27. The winter population trend in the EU27 is Increasing in the short term and Increasing in the long term.

The EU population status of *Netta rufina* was assessed as Secure, because the species does not meet any of the IUCN Red List criteria for threatened or Near Threatened, or the criteria for Depleted or Declining (the EU27 population or range has not declined by 20% or more since 1980).

## Assessment of status at the European level

Breeding population size	Breeding population trend		Range	Breeding range trend		Winter	Winter population trend		Population
	Short term	Long term	area	Short term	Long term	population size	Short term	Long term	status

See the endnotes for more information<sup>i</sup>

## Trends at the Member State level

	% in	Breeding population size	Breeding population trend		Range	Breeding range trend		Winter population	Winter population trend	
	EU27		Short term	Long term	area	Short term	Long term	size	Short term	Long term
UK	100.0	10 - 34 p	+	+	5000	+	+			

See the endnotes for more information ii

Short-term breeding population trend was not reported for this species.

Short-term winter population trend was not reported for this species.

This information is derived from the Member State national reports submitted to the European Commission under Article 12 of the Birds Directive in 2013 and covering the period 2008-2012. More detailed information, including the MS reports, is available at: <a href="http://bd.eionet.europa.eu/article12/summary?period=1&subject=A058-X">http://bd.eionet.europa.eu/article12/summary?period=1&subject=A058-X</a>.

#### Netta rufina

Report under the Article 12 of the Birds Directive

<sup>1</sup> Assessment of status at the European level: The EU assessments of birds population status was made by the European Red List of Birds Consortium (under contract with the European Commission)

The EU27 population trends were assessed using these categories: '+' Increasing, '0' Stable, 'F' Fluctuating, '-' Decreasing, 'xu' Uncertain and 'x' Unknown. The breeding population size is estimated in majority of the cases as 'p' number of pairs. Alternative population units used are: 'males' number of males, 'i' number of individuals, 'cmales' number of calling males and 'bfem' number of breeding females. The winter population size is estimated as number of individuals.

<sup>ii</sup>Species trends at the Member State level: The percentage of the EU27 species population occurring in the Member States (% in EU27) is calculated based on the population size reported by the Member States.
