### Passer domesticus

Annex I No International action plan No

House Sparrow, *Passer domesticus*, is a species of passerine bird in the sparrow family found in cropland and urban ecosystems.

Passer domesticus has a breeding population size of 108000000-149000000 pairs and a breeding range size of 3560000 square kilometres in the EU27. The breeding population trend in the EU27 is Stable in the short term and Decreasing in the long term.

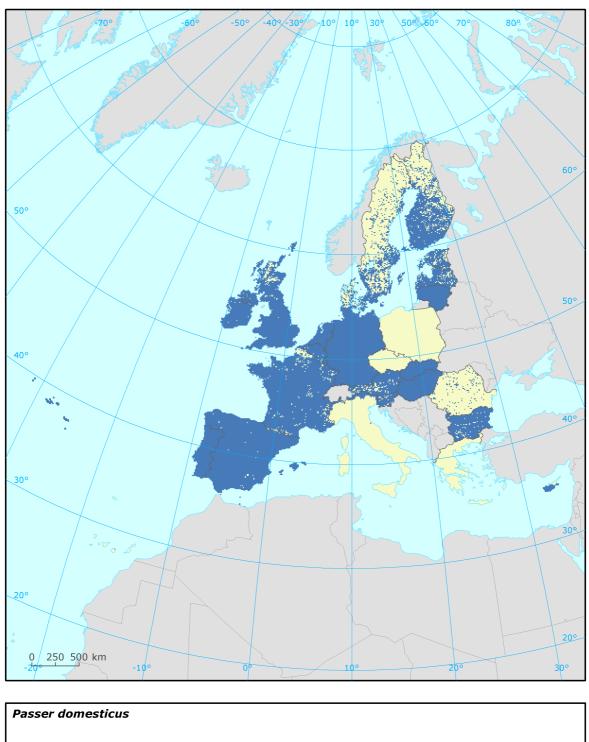

The EU population status of *Passer domesticus* was assessed as Depleted, because the EU27 population or range declined by at least 20% since 1980, but has no longer been declining since 2001.

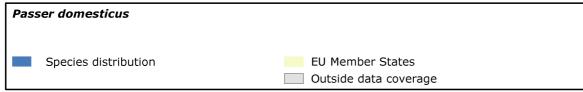

Report under the Article 12 of the Birds Directive

# Assessment of status at the European level

Breeding population size	Breeding population trend		_ Range _	Breeding range trend		Winter population	Winter population trend		_Population
	Short term	Long term	area	Short term	Long term	size	Short term	Long term	status
108000000 - 149000000 p	0	_	3560000						Depleted

### Report under the Article 12 of the Birds Directive

Report under the Article 12 of the Birds Directive

Short-term winter population trend was not reported for this species.

This information is derived from the Member State national reports submitted to the European Commission under Article 12 of the Birds Directive in 2013 and covering the period 2008-2012. More detailed information, including the MS reports, is available at: http://bd.eionet.europa.eu/article12/summary?period=1&subject=A620.

Report under the Article 12 of the Birds Directive

<sup>i</sup> Assessment of status at the European level: The EU assessments of birds population status was made by the European Red List of Birds Consortium (under contract with the European Commission)

The EU27 population trends were assessed using these categories: '+' Increasing, '0' Stable, 'F' Fluctuating, '-' Decreasing, 'xu' Uncertain and 'x' Unknown. The breeding population size is estimated in majority of the cases as 'p' number of pairs. Alternative population units used are: 'males' number of males, 'i' number of individuals, 'cmales' number of calling males and 'bfem' number of breeding females. The winter population size is estimated as number of individuals.

<sup>ii</sup>Species trends at the Member State level: The percentage of the EU27 species population occurring in the Member States (% in EU27) is calculated based on the population size reported by the Member States.
