

Puffinus assimilis baroli

Annex I	Yes-HTL
International action plan	No

Audubon's Shearwater, *Puffinus assimilis*, is a species of seabird found in unvegetated or sparsely vegetated land ecosystems.

Puffinus assimilis has a breeding population size of 2900-3800 pairs and a breeding range size of 9500 square kilometres in the EU27. The breeding population trend in the EU27 is Decreasing in the short term and Uncertain in the long term.

The EU population status of *Puffinus assimilis* was assessed as Near Threatened, because the species comes close to meeting the IUCN Red List criteria at the EU27 scale.

Assessment of status at the European level

Breeding population size	Breeding population trend		Range area	Breeding range trend		Winter population size	Winter population trend		Population status
	Short term	Long term		Short term	Long term		Short term	Long term	
2900 - 3800 p	-	u	9500						Near Threatened

See the endnotes for more informationⁱ

Puffinus assimilis baroli
Report under the Article 12 of the Birds Directive

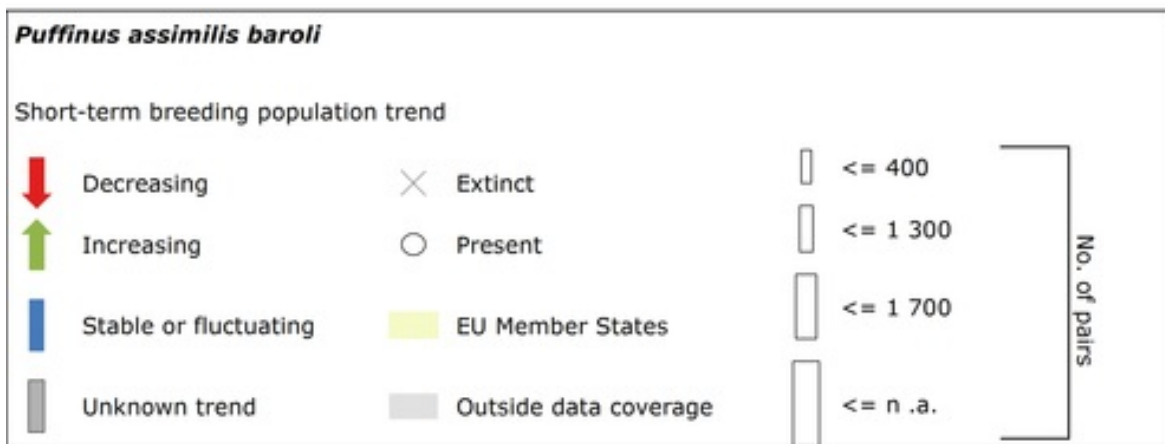

Trends at the Member State level

MS/Ter.	% in EU27	Breeding population size	Breeding population trend		Range area	Breeding range trend		Winter population size	Winter population trend	
			Short term	Long term		Short term	Long term		Short term	Long term
ESIC	32.9	400 - 400 p	-	-	2300	-	-			
PTAC	38.4	895 - 1741 p	x	x	4600	x	x			
PTMA	28.8	1642 - p	-	0	2600	+	x			

See the endnotes for more informationⁱⁱ

Puffinus assimilis baroli
 Report under the Article 12 of the Birds Directive

Short-term winter population trend was not reported for this species.

Main pressures and threats reported by Member States

For the bird species triggering SPA classification Member States were asked to report the 20 most important pressures and threats using an agreed hierarchical list which can be found on the Article 12 Reference Portal (http://bd.eionet.europa.eu/activities/Reporting/Article_12/reference_portal). Pressures are activities which are currently having an impact on the species and threats are activities expected to have an impact in the near future. The table below only contains information from Member States, where a species triggers SPA classification. Pressures and threats were ranked in three classes 'high, medium and low importance', the table below only shows pressures and threats classed as 'high', for some species there were less than ten pressures and threats reported as highly important.

Ten most frequently reported 'highly important' pressures and threats

Code	Activity	Frequency
K03	Interspecific faunal relations	43
H03	Pollution to marine waters	14
H06	Excess energy (noise, light, heating, electromagnetic)	14
J03	Other changes to ecosystems	14
M02	Biotic changes (climate change)	14

Proportion of population covered by the Natura 2000 network

For the bird species triggering SPA classification Member States were asked to report the size of a species population occurring within the Natura 2000 network. The percentage of species population covered by the network was estimated by comparing the population size within the network and the total population size.

Percentage of coverage by Natura 2000 sites

MS/territory	season	SPA trigger	% coverage
ESIC	breeding	YES	18.5
PTAC	breeding	YES	26.36
PTMA	breeding	YES	85.26

See the endnotes for more informationⁱⁱⁱ

Most frequently reported conservation measures

For the bird species triggering SPA classification Member States were asked to report up to 20 conservation measures being implemented for this species using an agreed list which can be found on the Article 12 Reference Portal. Member States were further requested to highlight up to

Puffinus assimilis baroli

Report under the Article 12 of the Birds Directive

five most important ('highly important') measures; the table below only shows measures classed as 'high', for many species there were less than ten measures reported as highly important.

Ten most frequently reported 'highly important' conservation measures

Code	Measure	Frequency
6.3	Legal protection of habitats and species	33
3.1	Restoring/improving forest habitats	11
4.4	Restoring coastal areas	11
5.1	Restoring marine habitats	11
7.1	Regulation/ Management of hunting and taking	11
8.0	Other measures	11
8.2	Specific management of traffic and energy transport systems	11

This information is derived from the Member State national reports submitted to the European Commission under Article 12 of the Birds Directive in 2013 and covering the period 2008-2012. More detailed information, including the MS reports, is available at:
<http://bd.eionet.europa.eu/article12/summary?period=1&subject=A504> .

ⁱ **Assessment of status at the European level:** The EU assessments of birds population status was made by the European Red List of Birds Consortium (under contract with the European Commission)

The EU27 population trends were assessed using these categories: '+' Increasing, '0' Stable, 'F' Fluctuating, '-' Decreasing, 'xu' Uncertain and 'x' Unknown. The breeding population size is estimated in majority of the cases as 'p' number of pairs. Alternative population units used are: 'males' number of males, 'i' number of individuals, 'cmales' number of calling males and 'bfem' number of breeding females. The winter population size is estimated as number of individuals.

ⁱⁱ **Species trends at the Member State level:** The percentage of the EU27 species population occurring in the Member States (% in EU27) is calculated based on the population size reported by the Member States.

ⁱⁱⁱ **Percentage of coverage by Natura 2000 sites:** In some cases the population size within the Natura 2000 network has been estimated using a different methodology to the estimate of overall population size and this can lead to percentage covers greater than 100%. In such case the value has been given as 100% and highlighted with an asterisk (*). The value 'x' indicates that the Member State has not reported the species population and/or the coverage by Natura 2000. No information is available for Greece and for non-Annex I species in the Czech Republic.
