Grand challenges in marine ecosystems ecology

Angel Borja *

AZTI-Tecnalia, Marine Research Division, Pasaia, Spain

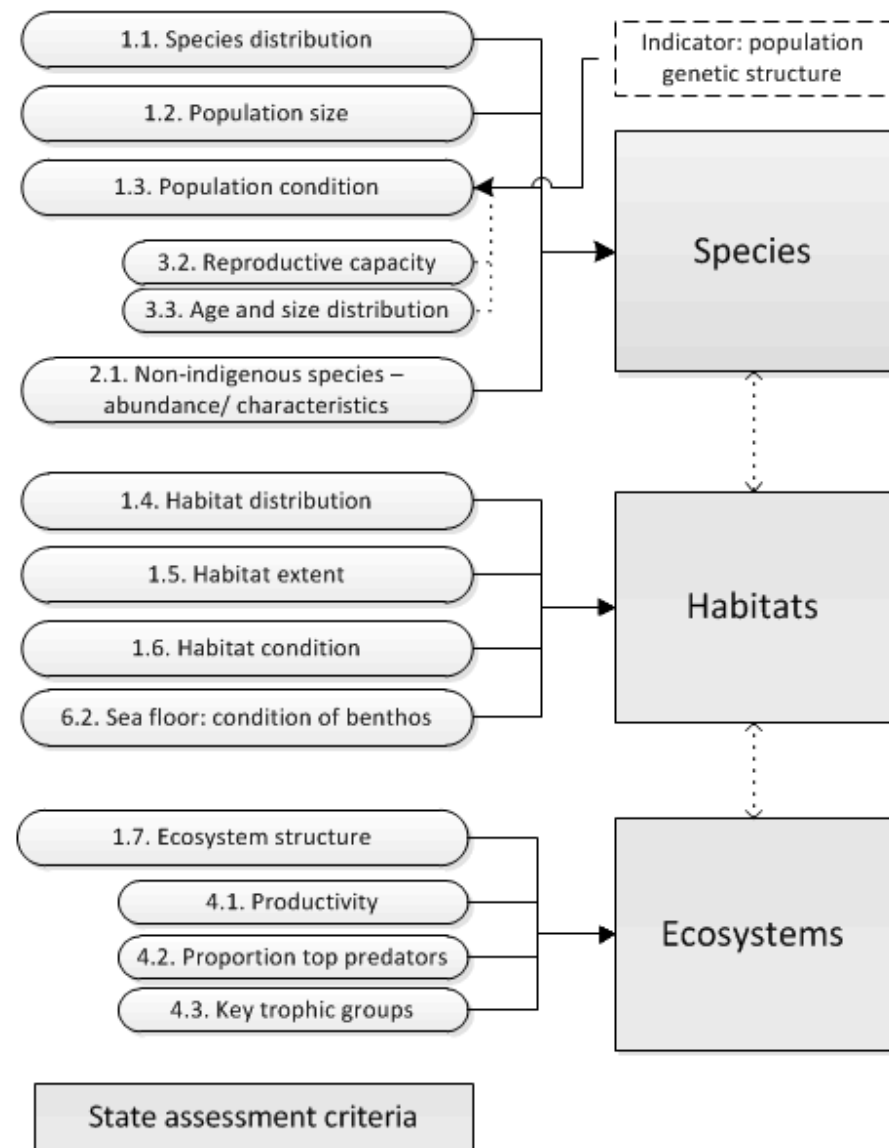

Grand Challenge 1

UNDERSTANDING THE ROLE OF BIODIVERSITY IN MAINTAINING ECOSYSTEMS FUNCTIONALITY

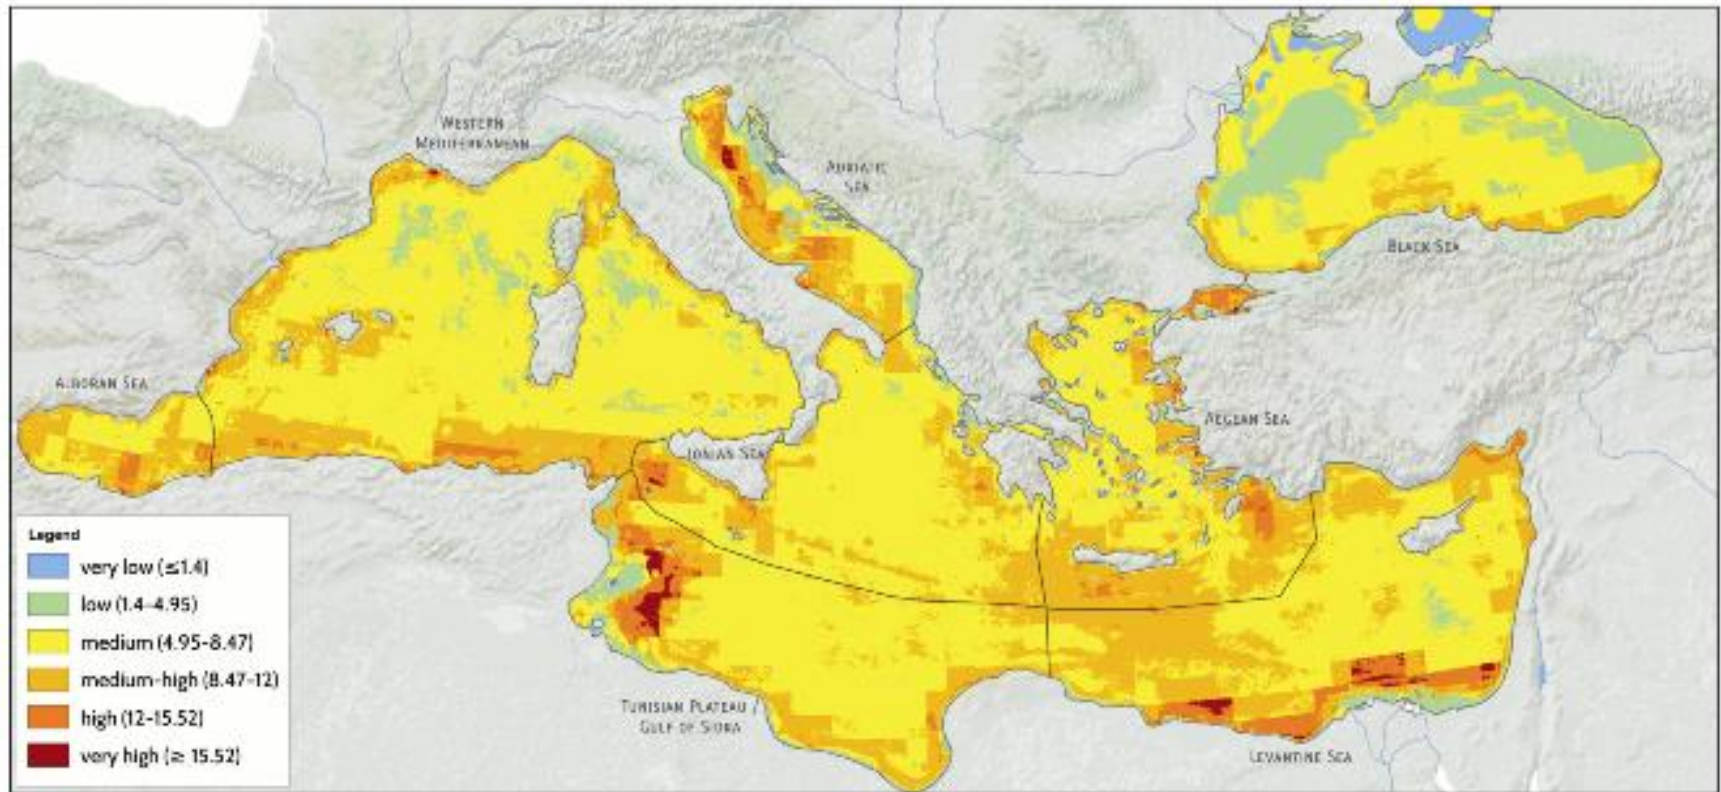

Rockström, et al. 2009. Planetary boundaries:exploring the safe operating space for humanity. Ecology and Society, 14: 32 pp.

Biodiversity provide evidence of its importance in sustaining ecosystem functioning and services and preventing ecosystems from tipping into undesired states

Grand Challenge 2

UNDERSTANDING RELATIONSHIPS BETWEEN HUMAN PRESSURES AND ECOSYSTEMS

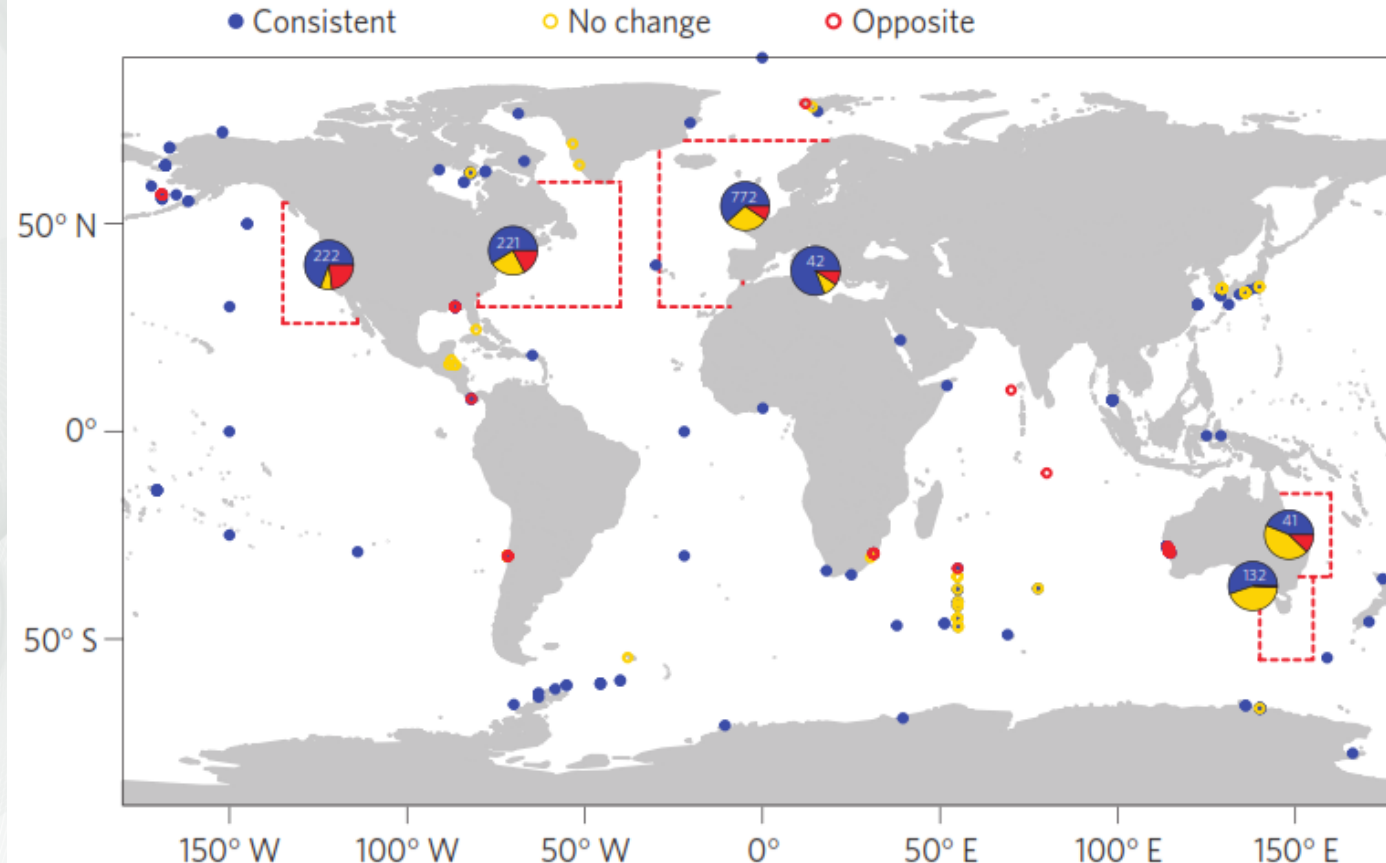

Micheli et al. 2013. Cumulative Human Impacts on Mediterranean and Black Sea Marine Ecosystems: Assessing Current Pressures and Opportunities. PLoS ONE, 8: e79889.

Humans are considered part of the
marine ecosystem

Grand Challenge 3

UNDERSTANDING THE IMPACT OF GLOBAL CHANGE ON MARINE ECOSYSTEMS

Poloczanska et al. 2013. Global imprint of climate change on marine life.
Nature Climate Change, 3: 919-925.

Understanding:

- Capacity of adaptation
- Cascading implications
- Effects combined with human pressures
- Adaptive strategies

From 1735 marine biological responses to global change 81–83% are consistent with the expected impacts of climate change on marine life

Grand Challenge 4

ASSESSING MARINE ECOSYSTEMS HEALTH IN AN INTEGRATIVE WAY

Marine Pollution Bulletin 76 (2013) 16–27

Contents lists available at [ScienceDirect](#)

Marine Pollution Bulletin

journal homepage: www.elsevier.com/locate/marpolbul

Viewpoint

Good Environmental Status of marine ecosystems: What is it and how do we know when we have attained it?

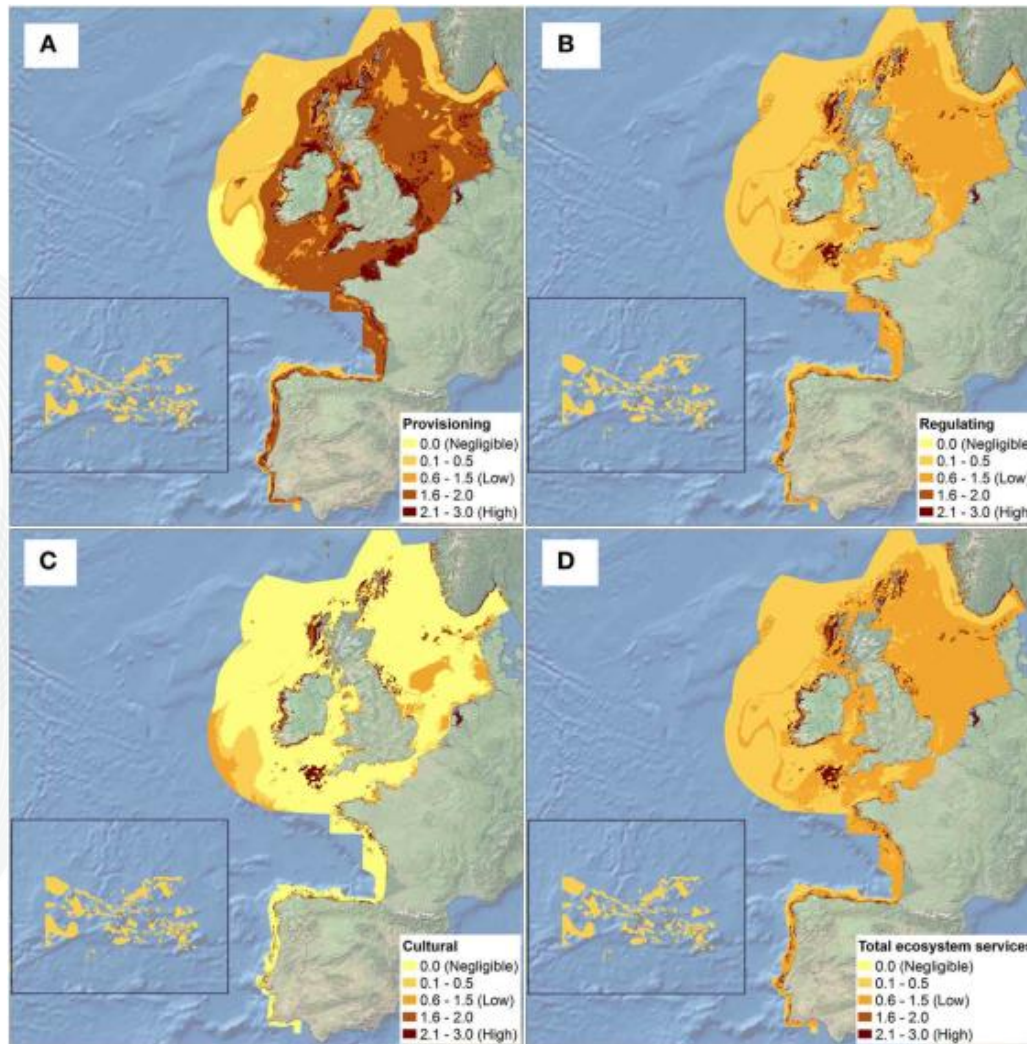

Angel Borja ^{a,*}, Mike Elliott ^b, Jesper H. Andersen ^c, Ana C. Cardoso ^g, Jacob Carstensen ^c, João G. Ferreira ^d, Anna-Stiina Heiskanen ^e, João C. Marques ^f, João M. Neto ^f, Heliana Teixeira ^g, Laura Uusitalo ^e, María C. Uyarra ^a, Nikolaos Zampoukas ^g

Halpern et al. 2012. An index to assess the health and benefits of the global ocean.
Nature, 488: 615-620.

Grand Challenge 5

DELIVERING ECOSYSTEM SERVICES BY CONSERVING AND PROTECTING OUR SEAS

Need of:

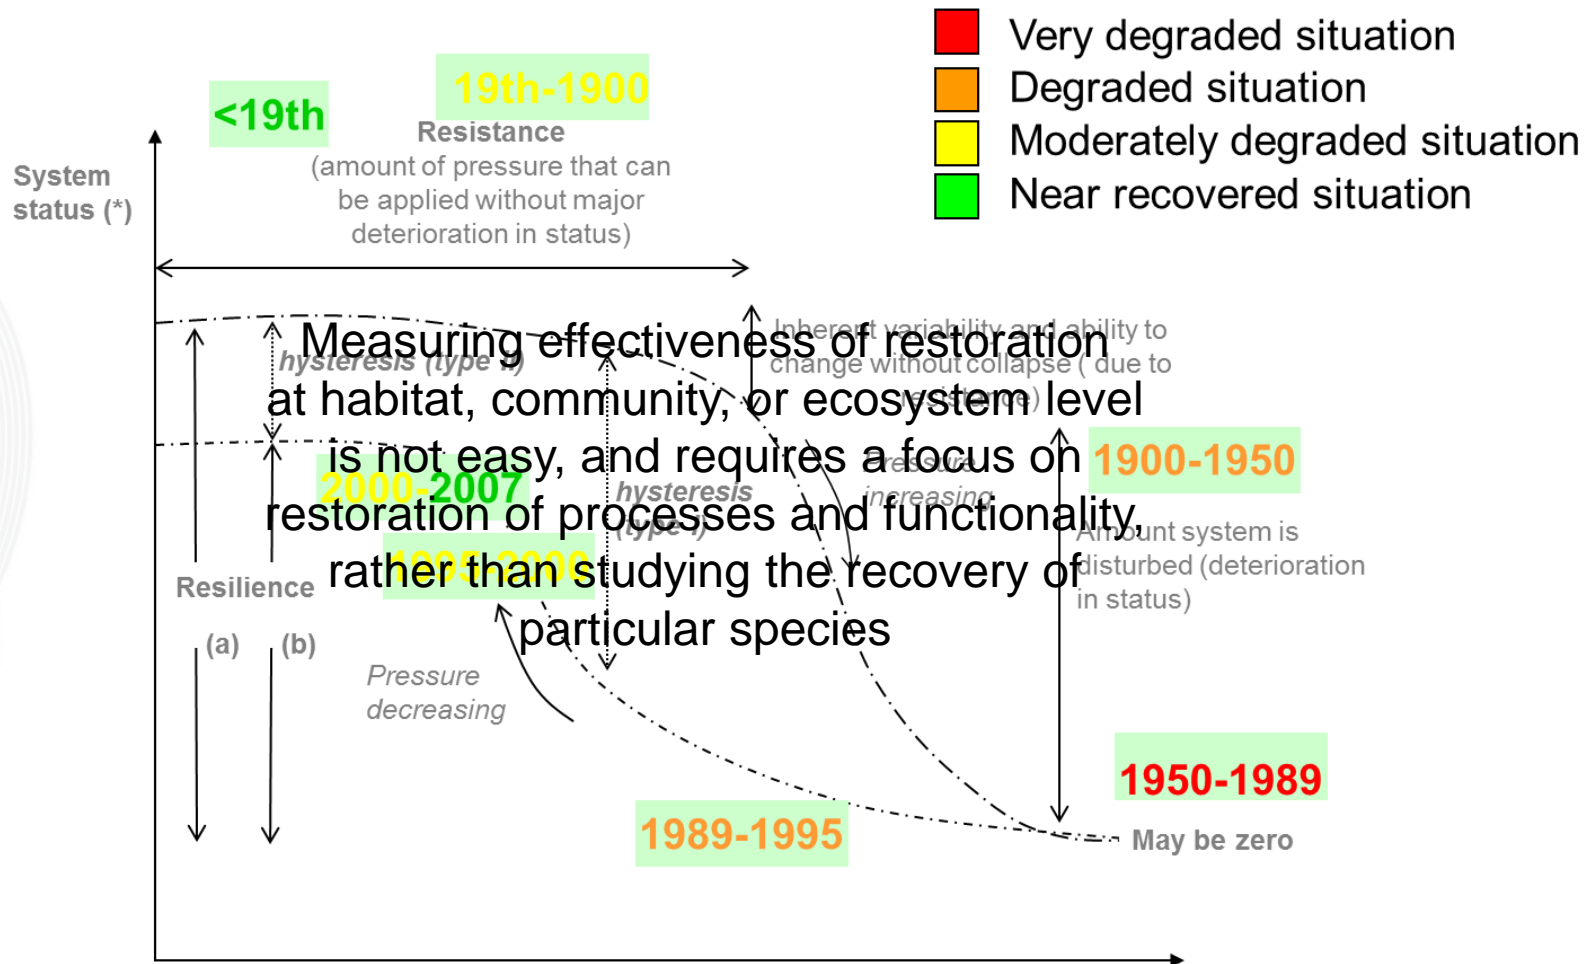

- Marine protected areas and near-natural systems
- Reducing habitat fragmentation
- Determining vulnerability of species and habitats
- Enhance connectivity to maintain habitat quality

Galparsoro et al. 2014. Mapping ecosystem services provided by benthic habitats in the European North Atlantic Ocean.

Frontiers in Marine Science, 1.

Grand Challenge 6

RECOVERING ECOSYSTEM STRUCTURE AND FUNCTIONING THROUGH RESTORATION

Borja et al. 2010. Medium- and Long-term Recovery of Estuarine and Coastal Ecosystems: Patterns, Rates and Restoration Effectiveness. *Estuaries and Coasts*, 33: 1249-1260.

Grand Challenge 7

MANAGING THE SEAS USING THE ECOSYSTEM APPROACH AND SPATIAL PLANNING

Developed with the financial support of

GORDON AND BETTY
MOORE
FOUNDATION

the David
Lucile Packard
FOUNDATION

Additional support was provided by WWF-International and the government of Belgium.

United Nations
Educational, Scientific and
Cultural Organization

Intergovernmental
Oceanographic
Commission

MAB

Grand Challenge 8

MODELING ECOSYSTEMS FOR BETTER MANAGEMENT

Harfoot et al. 2014. Integrated assessment models for ecologists: the present and the future. *Global Ecology and Biogeography*, **23**: 124-143.

Schematic representation of a typical full-scale integrated assessment model composition, including scenario assumptions as input and projection outputs

Conclusions

To achieve these challenges we need:

- Effective long-term monitoring of populations and communities
- Develop new ways to get reliable, verifiable, efficient and cost-effective monitoring methods
- To understand marine ecosystem functioning and its responses to environmental and anthropogenic pressures
- Data integration of the different ecosystem components in order to understand large-scale patterns and long-term changes
- Open access to scientific data and publications (science-based knowledge)
