

GLOBAL FOREST RESOURCES ASSESSMENT 2015

COUNTRY REPORT

Liechtenstein

Rome, 2014

FAO, at the request of its member countries, regularly monitors the world's forests and their management and uses through the Global Forest Resources Assessment (FRA). This country report is prepared as a contribution to the FAO publication, the Global Forest Resources Assessment 2015 (FRA 2015).

The content and the structure are in accordance with the recommendations and guidelines given by FAO in the document Guide for country reporting for FRA 2015 (<http://www.fao.org/3/a-au190e.pdf>). These reports were submitted to FAO as official government documents.

The content and the views expressed in this report are the responsibility of the entity submitting the report to FAO. FAO may not be held responsible for the use which may be made of the information contained in this report.

TABLE OF CONTENTS

Report preparation and contact persons.....	4
1. What is the area of forest and other wooded land and how has it changed over time?	5
2. What is the area of natural and planted forest and how has it changed over time?	11
3. What are the stocks and growth rates of the forests and how have they changed?	15
4. What is the status of forest production and how has it changed over time?	23
5. How much forest area is managed for protection of soil and water and ecosystem services?	30
6. How much forest area is protected and designated for the conservation of biodiversity and how has it changed over time?	35
7. What is the area of forest affected by woody invasive species?	38
8. How much forest area is damaged each year?	41
9. What is the forest area with reduced canopy cover?	45
10. What forest policy and regulatory framework exists to support implementation of sustainable forest management SFM?	46
11. Is there a national platform that promotes stakeholder participation in forest policy development?	48
12. What is the forest area intended to be in permanent forest land use and how has it changed over time?	49
13. How does your country measure and report progress towards SFM at the national level?	52
14. What is the area of forest under a forest management plan and how is this monitored?	54
15. How are stakeholders involved in the management decision making for publicly owned forests?	56
16. What is the area of forest under an independently verified forest certification scheme?	57
17. How much money do governments collect from and spend on forests?	59
18. Who owns and manages the forests and how has this changed?	61
19. How many people are directly employed in forestry?	66
20. What is the contribution of forestry to Gross Domestic Product (GDP)?	68
21. What is forest area likely to be in the future	69

Introductory Text

Place an introductory text on the content of this report

No report has been received from the country. This report is the result of a desk study prepared by the FRA secretariat in Rome, which is based on the existing available information using the established format for FRA 2015/CFRQ format

Desk Study?

Check "yes" if this survey is a Desk Study, "no" otherwise	
Desk Study?	yes

1. What is the area of forest and other wooded land and how has it changed over time?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

1.1 Categories and definitions

Category	Definition
Forest	Land spanning more than 0.5 hectares with trees higher than 5 meters and a canopy cover of more than 10 percent or trees able to reach these thresholds in situ. It does not include land that is predominantly under agricultural or urban land use.
Other wooded land	Land not classified as "Forest" spanning more than 0.5 hectares with trees higher than 5 meters and a canopy cover of 5-10 percent or trees able to reach these thresholds ; or with a combined cover of shrubs bushes and trees above 10 percent. It does not include land that is predominantly under agricultural or urban land use.
Other land	All land that is not classified as "Forest" or "Other wooded land".
...of which with tree cover (<i>sub-category</i>)	Land considered as "Other land", that is predominantly agricultural or urban lands use and has patches of tree cover that span more than 0.5 hectares with a canopy cover of more than 10 percent of trees able to reach a height of 5 meters at maturity. It includes bothe forest and non-forest tree species.
Inland water bodies	Inland water bodies generally include major rivers, lakes and water reservoirs.
Forest expansion	Expansion of forest on land that, until then, was not defined as forest.
...of which afforestation (<i>sub-category</i>)	Establishment of forest through planting and/or deliberate seeding on land that, until then, was not defined as forest.
...of which natural expansion of forest (<i>sub-category</i>)	Expansion of forests through natural succession on land that, until then, was under another land use (e.g. forest succession on land previously used for agriculture).
Deforestation	The conversion of forest to other land use or the longterm reduction of the tree canopy cover below the minimum 10 percent threshold.
...of which human induced (<i>sub-category</i>)	Human induced conversion of forest to other land use or the permanent reduction of the tree canopy cover below the minimum 10 percent threshold.
Reforestation	Natural regeneration or re-establishment of forest through planting and/or deliberate seeding on land already in forest land use.
...of which artificial reforestation (<i>sub-category</i>)	Re-establishment of forest through planting and/or deliberate seeding on land already in forest land use.

1.3 Analysis and processing of national data

1.3.1 Adjustment

No calibration is needed.

1.3.2 Estimation and forecasting

UNECE reports an average annual increase of 80 ha per year in the area of forest between 1975 and 1995. No other source has been found indicating that any other change rate should be used. The updated MCPFE State of

Europe's Forests 2003 does not indicate any change in forest and other wooded land area. Hence, the change rate between 1995 and 2005 is assumed to be 0 percent, and the same figures (1995) are used for 2000, 2005, 2000 and forecasted for 2015. No change is reported for other wooded land between 1975 and 1995. Consequently, the change is assumed to be 0 percent. These trends were confirmed by the national correspondents in the national report for Forest Europe/UNECE/FAO State of Europe's Forests 2011.

1.3.3 Reclassification

No further reclassification is needed, as the national data already are presented according to the FRA categories.

1.4 Data

Table 1a

Deforestation	N/A	N/A
Reforestation	N/A	N/A

Other general comments to the table

UNECE reports an average annual increase of 80 ha per year in the area of forest between 1975 and 1995. No other source has been found indicating that any other change rate should be used. The updated MCPFE State of Europe's Forests 2005 does not indicate any change in forest and other wooded land area. Hence, the change rate between 1995 and 2005 is assumed to be 0 percent, and the same figures (1995) are used for 2000, 2005 and forecasted for 2010. No change is reported for other wooded land between 1975 and 1995. Consequently, the change is assumed to be 0 percent. These trends were confirmed by the national correspondents in the national report for Forest Europe/UNECE/FAO State of Europe's Forests 2011. The classification and definitions used in the UNECE/FAO report are the same as those being used by FRA

2. What is the area of natural and planted forest and how has it changed over time?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

2.1 Categories and definitions

Term	Definition
Naturally regenerated forest	Forest predominantly composed of trees established through natural regeneration.
Naturalized introduced species	Other naturally regenerated forest where the tree species are predominantly non-native and do not need human help to reproduce/maintain populations over time.
Introduced species	A species, subspecies or lower taxon occurring outside its natural range (past or present) and dispersal potential (i.e. outside the range it occupies naturally or could occupy without direct or indirect introduction or care by humans).
Category	Definition
Primary forest	Naturally regenerated forest of native species where there are no clearly visible indications of human activities and the ecological processes are not significantly disturbed.
Other naturally regenerated forest	Naturally regenerated forest where there are clearly visible indications of human activities.
...of which of introduced species (<i>sub-category</i>)	Other naturally regenerated forest where the trees are predominantly of introduced species.
...of which naturalized (<i>sub-sub category</i>)	Other naturally regenerated forest where the trees are predominantly of naturalized introduced species.
Planted forest	Forest predominantly composed of trees established through planting and/or deliberate seeding.
...of which of introduced species (<i>sub-category</i>)	Planted forest where the planted/seeded trees are predominantly of introduced species.
Mangroves	Area of forest and other wooded land with mangrove vegetation.
...of which planted (<i>sub-category</i>)	Mangroves predominantly composed of trees established through planting.

2.2 National data

2.2.1 Data sources

	References to sources of information	Variables	Years	Additional comments
1	MCPFE/UNECE/FAO, 2007. State of Europe's Forests 2007	N/A	2005	Secondary data source.

3	N/A	N/A	N/A	N/A

4	N/A	N/A	N/A	N/A
---	-----	-----	-----	-----

2.2.2 Classification and definitions

National class	Definition
Undisturbed by man	Forest/other wooded land which shows natural forest dynamics, such as natural tree composition, occurrence of dead wood, natural age structure and natural regeneration processes, the area of which is large enough to maintain its natural characteristics and where there has been no known significant human intervention or where the last significant human intervention was long enough ago to have allowed the natural species composition and processes to have become re-established.
Seminatural	Forest/other wooded land which is neither undisturbed by man nor plantation. Includes the subcategory modified natural Forest/other wooded land. The subcategory modified natural includes forest/other wooded land which shows characteristics of the class undisturbed by man, but where there are clear indications of human activities.
Plantation	Forest stands established by planting or/and seeding in the process of afforestation/reforestation. They are either of introduced species (all planted stands) or intensively managed stands of indigenous species which meet all the following criteria: one or two species at plantation, even age class, regular spacing
N/A	N/A

2.2.3 Original data

--

2.3 Analysis and processing of national data

2.3.1 Adjustment

Not needed.

2.3.2 Estimation and forecasting

<p>Primary forest has been reclassified as primary forest in accordance with the FRA 2010 definition and plantations has been reclassified as planted forest. The difference between the total forest area, the primary forest and the plantations, gives the area reported by MCPFE as “semi-natural” forest and this area has been assumed to correspond to the other naturally regenerated forest of FRA 2010. It should be noted that since no information on the regeneration method was available, the previous assumptions may lead to an overestimation of the other naturally regenerated forest, which may include a part of the planted forest.</p>
--

For the year 2015 same figures as 2010 were applied.

2.3.3 Reclassification

FRA 2010 categories	MCPFE categories		
	Forest undisturbed by man	Semi-natural forest	Plantations
Primary forest	100%		
Other naturally regenerated forest		100%	
Planted			100%

3. What are the stocks and growth rates of the forests and how have they changed?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

3.1 Categories and definitions

Category	Definition
Growing stock	Volume over bark of all living trees with a minimum diameter of 10 cm at breast height (or above buttress if these are higher). Includes the stem from ground level up to a top diameter of 0 cm, excluding branches.
Net Annual Increment (NAI)	Average annual volume of gross increment over the given reference period less that of natural losses on all trees, measured to minimum diameters as defined for "Growing stock".
Above-ground biomass	All living biomass above the soil including stem stump branches bark seeds and foliage.
Below-ground biomass	All biomass of live roots. Fine roots of less than 2 mm diameter are excluded because these often cannot be distinguished empirically from soil organic matter or litter.
Dead wood	All non-living woody biomass not contained in the litter either standing lying on the ground or in the soil. Dead wood includes wood lying on the surface dead roots and stumps larger than or equal to 10 cm in diameter or any other diameter used by the country.
Carbon in above-ground biomass	Carbon in all living biomass above the soil including stem stump branches bark seeds and foliage.
Carbon in below-ground biomass	Carbon in all biomass of live roots. Fine roots of less than 2 mm diameter are excluded because these often cannot be distinguished empirically from soil organic matter or litter.
Carbon in dead wood	Carbon in all non-living woody biomass not contained in the litter, either standing, lying on the ground, or in the soil. Dead wood includes wood lying on the surface, dead roots and stumps larger than or equal to 10 cm in diameter or any other diameter used by the country.
Carbon in litter	Carbon in all non-living biomass with a diameter less than the minimum diameter for dead wood (e.g. 10 cm) lying dead in various states of decomposition above the mineral or organic soil.
Soil carbon	Organic carbon in mineral and organic soils (including peat) to a soil depth of 30 cm.

3.2 National data

3.2.1 Data sources

	References to sources of information	Variables	Years	Additional comments
1	UNECE/FAO, 2000. Forest Resources of Europe, CIS, North America, Australia, Japan and New Zealand	N/A	1995	Secondary data source. Growing stock information is a secretariat estimate based on different (unspecified) information sources
2	Forest Europe/UNECE/FAO, 2011. State of Europe's Forest 2011	N/A	1990, 2000, 2005, 2010	Secondary data source.
3	N/A	N/A	N/A	N/A

4	N/A	N/A	N/A	N/A
---	-----	-----	-----	-----

3.2.2 Classification and definitions

National class	Definition
Growing stock	The living tree component of the standing volume
N/A	The UNECE/FAO 2000 report on two categories: Carbon in above-stump biomass and carbon in stump and root biomass. There is a small difference in the definitions of the biomass fractions as compared to FRA regarding the stump biomass. In UNECE/FAO 2000 the stump biomass is grouped together with the root biomass, while in FRA the above-ground portion of the stump belongs to Above-ground biomass.
N/A	N/A
N/A	N/A

3.2.3 Original data

<p>Growing stock</p> <p>Growing stock on Forest = 1 750 000 m³</p> <p>For other wooded land, UNECE/FAO does not provide any information, and no other data sources have been found.</p> <p>Timber volume: 2.33 million m³ = 340 m³/ha Stem numbers: 2.95 million units = 430 units / ha. Growth per year: 8.50 m³/ha Wood harvest: 25,000 m³</p> <p><i>http://www.llv.li/amtsstellen/llv-awnl-wald_und_holz/llv-awnl-wald_und_holz-der_liechtensteiner_wald_in_zahlen.htm</i></p> <p>Biomass stock</p> <p>No data on biomass is presented in the data source. The data presented in this table have been derived from the available information on carbon for different biomass categories (see chapter 8.2.3) and applying a default carbon content of 50 percent to derive the biomass figure. The data will then be as follows:</p>

Category	Tg biomass (Oven dry weight)
Above stump biomass	0.82
Stump and root biomass	0.20

Note that one teragram (Tg) is 1×10^{12} g and equals one million metric tonne. The above data only refer to forest. No information on biomass of dead wood has been found.

Carbon stock

Category	Tg Carbon
Above stump biomass	0.41
Stump and root biomass	0.1

Note that one Teragram (Tg) is 1×10^{12} g and equals one million metric tonne.

3.3 Analysis and processing of national data

3.3.1 Adjustment

No calibration was needed.

3.3.2 Estimation and forecasting

Growing stock

The 1995 figures have been used for 2000, 2005, 2010 and 2015. The 1990 figure has been calculated by using the volume per hectare (253.6 m³/ha) figure for 1995 multiplied by the total forest area for 1990.

Biomass and carbon stock

No time series of data is available. Hence, the 1995 figures have been used for 2000, 2005, 2010 and 2015. The 1990 figures have been derived by calibrating the biomass stock figures with the total forest area for 1990.

3.3.3 Reclassification

Growing stock

Not needed.

Biomass stock

“Above-stump biomass” is considered to correspond to “Above-ground biomass” and “Stump and root biomass” is considered to correspond to “Below-ground biomass”.

2005 figures were applied also for 2010 and 2015, since no updated information was available.

Carbon stock

Above stump biomass = Above ground biomass

Stump and root biomass = Below ground biomass

4.1 Categories and definitions

Term	Definition
Primary designated function	The primary function or management objective assigned to a management unit either by legal prescription documented decision of the landowner/manager or evidence provided by documented studies of forest management practices and customary use.
Non wood forest product (NWFP)	Goods derived from forests that are tangible and physical objects of biological origin other than wood.
Commercial value of NWFP	For the purpose of this table, value is defined as the commercial market value at the forest gate.
Category	Definition
Production forest	Forest area designated primarily for production of wood, fibre, bio-energy and/or non-wood forest products.
Multiple use forest	Forest area designated for more than one purpose and where none of these alone is considered as the predominant designated function.
Total wood removals	The total of industrial round wood removals and woodfuel removals.
...of which woodfuel	The wood removed for energy production purposes, regardless whether for industrial, commercial or domestic use.

4.2 National data

4.2.1 Data sources

	References to sources of information	Variables	Years	Additional comments

3	N/A	N/A	N/A	N/A
4	N/A	N/A	N/A	N/A

4.2.2 Classification and definitions

National class	Definition
----------------	------------

Forest available for wood supply	Forests where any legal, economic, or specific environmental restrictions do not have a significant impact on the supply of wood. Includes areas where although there are no such restrictions harvesting is not taking place.
MCPFE class 1.1 for protected and protective forests and OWL	Main management objective is biodiversity. No active, direct human intervention is taking place.
MCPFE class 1.2	Main management objective is biodiversity. Human intervention limited to a minimum.
MCPFE class 1.3	Main management objective is biodiversity. A management with active interventions directed to achieve the specific conservation goal of the protected area is taking place.
MCPFE class 2	Main management objective is protection of landscapes and specific natural elements. Interventions are clearly directed to achieve the management goals landscape diversity, cultural, aesthetics, spiritual and historical value, recreation, specific natural elements.
MCPFE class 3	Main management objective is protective functions. The management is clearly directed to protect soil and its properties or water quality and quantity or other forest ecosystem functions or to protect infrastructure and managed natural resources against natural hazards.

4.2.3 Original data

The UNECE/FAO reports that the whole forested area in Liechtenstein (1995) is managed according to a strictly binding management plan. The objective of forest management embraces all activities intended to preserve multiple use forest ecosystems which are able to sustainably satisfy certain human needs as regards forest goods and non-material forest services on the one hand and the needs of plant and fauna species as regards conservation and amelioration of living conditions on the other. According to the multiple functions plan, the predominance of functions is as follows: protection function 40 percent; wood production 32 percent; nature protection 20 percent; recreational function eight percent.

Forest area from Question 1

FRA 2010 Category	Area (1000 hectares)			
	1990	2000	2005	2010
Forest	6.5	6.9	6.9	6.9

Multiple function plan	Forestarea (1 000 hectares)			
	1990	2000	2005	2010
Protection function (40%)	2.60	2.76	2.76	2.76
Wood production (32%)	2.08	2.21	2.21	2.21
Nature protection (20%)	1.30	1.38	1.38	1.38
Recreational function (8%)	0.52	0.55	0.55	0.55
Total	6.5	6.9	6.9	6.9

4.3 Analysis and processing of national data

4.3.1 Adjustment

No calibration has been made.

4.3.2 Estimation and forecasting

Not needed, the 1995 figures have been used for all reporting years.

4.3.3 Reclassification

National Class	FRA Categories (primary functions)					
	Production	Protection	Conservation	Social services	Multiple purpose	No or unknown
Protection function		100%				
Wood production	100%					
Nature protection			100%			

Recreational function				100%		
-----------------------	--	--	--	------	--	--

Forest area within protected areas = protection function + nature protection.

5. How much forest area is managed for protection of soil and water and ecosystem services?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

5.1 Categories and definitions

Category	Definition
Protection of soil and water	Forest area designated or managed for protection of soil and water
...of which production of clean water (<i>sub-category</i>)	Forest area primarily designated or managed for water production, where most human uses are excluded or heavily modified to protect water quality.
...of which coastal stabilization (<i>sub-category</i>)	Forest area primarily designated or managed for coastal stabilization.
...of which desertification control (<i>sub-category</i>)	Forest area primarily designated or managed for desertification control.
...of which avalanche control (<i>sub-category</i>)	Forest area primarily designated or managed to prevent the development or impact of avalanches on human life assets or infrastructure.
...of which erosion, flood protection or reducing flood risk (<i>sub-category</i>)	Forest area primarily designated or managed for protecting communities or assets from the impacts of erosion riparian floods and landslides or for providing flood plain services.
...of which other (<i>sub-category</i>)	Forest area primarily designated or managed for other protective functions.
Ecosystem services, cultural or spiritual values	Forest area primarily designated or managed for selected ecosystem services or cultural or spiritual values.
...of which public recreation (<i>sub-category</i>)	Forest area designated or managed for public recreation.
...of which carbon storage or sequestration (<i>sub-category</i>)	Forest area designated or managed for carbon storage or sequestration.
...of which spiritual or cultural services (<i>sub-category</i>)	Forest area designated or managed for spiritual or cultural services.
...of which other (<i>sub-category</i>)	Forest area designated or managed for other ecosystem services.

9. What is the forest area with reduced canopy cover?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

Category	Definition
Reduction in canopy cover	Forest that has undergone a reduction of canopy cover of more than 20% between the years 2000 and 2010 within the forest canopy cover range of 30-80% as detected by the MODIS VCF sensor.

Table 9

Category	Area of forest with reduced canopy cover (000 ha)
Reduction in canopy cover	1.5

10. What forest policy and regulatory framework exists to support implementation of sustainable forest management SFM?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

10.1 Categories and definitions

Category	Definition
Policies supporting sustainable forest management	Policies or strategies that explicitly encourage sustainable forest management.
Legislation and regulations supporting sustainable forest management	Legislation and regulations that govern and guide sustainable forest management, operations and use.

10.2 National data

10.2.1 Data sources

11. Is there a national platform that promotes stakeholder participation in forest policy development?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

11.1 Categories and definitions

Category	Definition
National stakeholder platform	A recognized procedure that a broad range of stakeholders can use to provide opinions, suggestions, analysis, recommendations and other input into the development of national forest policy.

11.2 National data

11.2.1 Data sources

	References to sources of information	Years	Additional comments

12. What is the forest area intended to be in permanent forest land use and how has it changed over time?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

12.1 Categories and definitions

Category	Definition
Forest area intended to be in permanent forest land use	Forest area that is designated or expected to be retained as forest and is highly unlikely to be converted to other land use.
...of which permanent forest estate (<i>sub-category</i>)	Forest area that is designated by law or regulation to be retained as forest and may not be converted to other land use.

13. How does your country measure and report progress towards SFM at the national level?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

13.1 Categories and definitions

Category	Definition
Forest area monitored under a national forest monitoring framework	Forest area monitored by a national monitoring framework or systems that provide measurement based periodic monitoring of forest extent and quality.
Forest reporting at national scale	National reporting of forest extent and characteristics that includes some measure of progress toward sustainable forest management.

13.2 National data

13.2.1 Data sources

	References to sources of information	Variables	Years	Additional comments

14. What is the area of forest under a forest management plan and how is this monitored?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

14.1 Categories and definitions

Category	Definition
Forest area with management plan	Forest area that has a long-term documented management plan, aiming at defined management goals which is periodically revised
...of which for production (<i>sub-category</i>)	Forest management plan mainly focused on production
...of which for conservation (<i>sub-category</i>)	Forest management plan mainly focused on conservation
Monitoring of forest management plans	Government monitoring of forest management plan implementation conducted through field visits or audits of forest management plan performance

14.2 National data

14.2.1 Data sources

	References to sources of information	Variables	Years	Additional comments
1	UNECE/FAO, 2000. Forest Resources of Europe, CIS, North America, Australia, Japan and New Zealand	Areas available for wood supply	1995	Secondary data source.

16. What is the area of forest under an independently verified forest certification scheme?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

16.1 Categories and definitions

Category	Definition
FSC certification	Forest area certified under the Forest Stewardship Council certification scheme
PEFC certification	Forest area certified under the Programme for the Endorsement of Forest Certification scheme
Other international forest management certification	Forest area certified under an international forest management certification scheme with published standards and is independently verified by a third-party, excluding FSC and PEFC certification.
Certified forest area using a domestic forest management certification scheme	Area certified under a forest management certification scheme with published standards that are nationally recognized and independently verified by a thirdparty

16.2 Data

17. How much money do governments collect from and spend on forests?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

17.1 Categories and definitions

Category	Definition
Forest revenue	All government revenue collected from the domestic production and trade of forest products and services. For this purpose revenue include: <ul style="list-style-type: none"> • <u>Goods</u> : roundwood; sawnwood; biomass; woodbased panels; pulp and paper and non-wood forest products. • <u>Services</u> : including concession fees and royalties, stumpage payments, public timber sales revenue taxes and charges based on forest area or yield, taxes on domestic trade and export of forest products, special levies on forestry activities and payments into forest related funds, other miscellaneous inspection, licence and administrative fees levied by forest administrations, permit and licence fees for recreation and other forest related activities.
Public expenditure on forestry	All government expenditure on forest related activities.

18. Who owns and manages the forests and how has this changed?

Documents for this question:

- [Guide for country reporting FRA 2015](#)
- [FRA 2015 Terms and Definitions](#)

18.1 Categories and definitions

Category	Definition
Public ownership	Forest owned by the State or administrative units of the public administration or by institutions or corporations owned by the public administration.
...of which owned by the state at national scale (<i>sub-category</i>)	Forest owned by the State at the national scale or administrative units of the public administration or by institutions or corporations owned by the public administration.
...of which owned by the state at the sub-national government scale (<i>sub-category</i>)	Forest owned by the State at the sub-national government scale or administrative units of the public administration or by institutions or corporations owned by the public administration.
Private ownership	Forest owned by individuals, families, communities, private cooperatives corporations and other business entities, private, religious and educational institutions, pension or investment funds, NGOs, nature conservation associations and other private institutions.
...of which individuals (<i>sub-category</i>)	Forest owned by individuals and families.
...of which private business entities and institutions (<i>sub-category</i>)	Forest owned by private corporations cooperatives companies and other business entities as well as private nonprofit organizations such as NGOs nature conservation associations, and private religious and educational institutions etc.
...of which local tribal and indigenous communities (<i>sub-category</i>)	Forest owned by a group of individuals belonging to the same community residing within or in the vicinity of a forest area or forest owned by communities of indigenous or tribal people The community members are coowners that share exclusive rights and duties and benefits contribute to the community development.
Unknown ownership	Forest area where ownership is unknown includes areas where ownership is unclear or disputed.
Categories related to management rights of public forests	Definition
Public Administration	The Public Administration (or institutions or corporations owned by the Public Administration) retains management rights and responsibilities within the limits specified by the legislation.
Individuals households	Forest management rights and responsibilities are transferred from the Public Administration to individuals or households through long-term leases or management agreements.
Private companies	Forest management rights and responsibilities are transferred from the Public Administration to corporations, other business entities private cooperatives, private nonprofit institutions and associations, etc., through long-term leases or management agreements.
Communities	Forest management rights and responsibilities are transferred from the Public Administration to local communities (including indigenous and tribal communities) through long-term leases or management agreements.
Other form of management rights	Forests for which the transfer of management rights does not belong to any of the categories mentioned above.
