

Habitat code: **1140**
 Habitat name: **Mudflats and sandflats not covered by sea water at low tide**

Habitat group: **coastal habitats**
 Regions: **ATL BOR CON MAC MED**

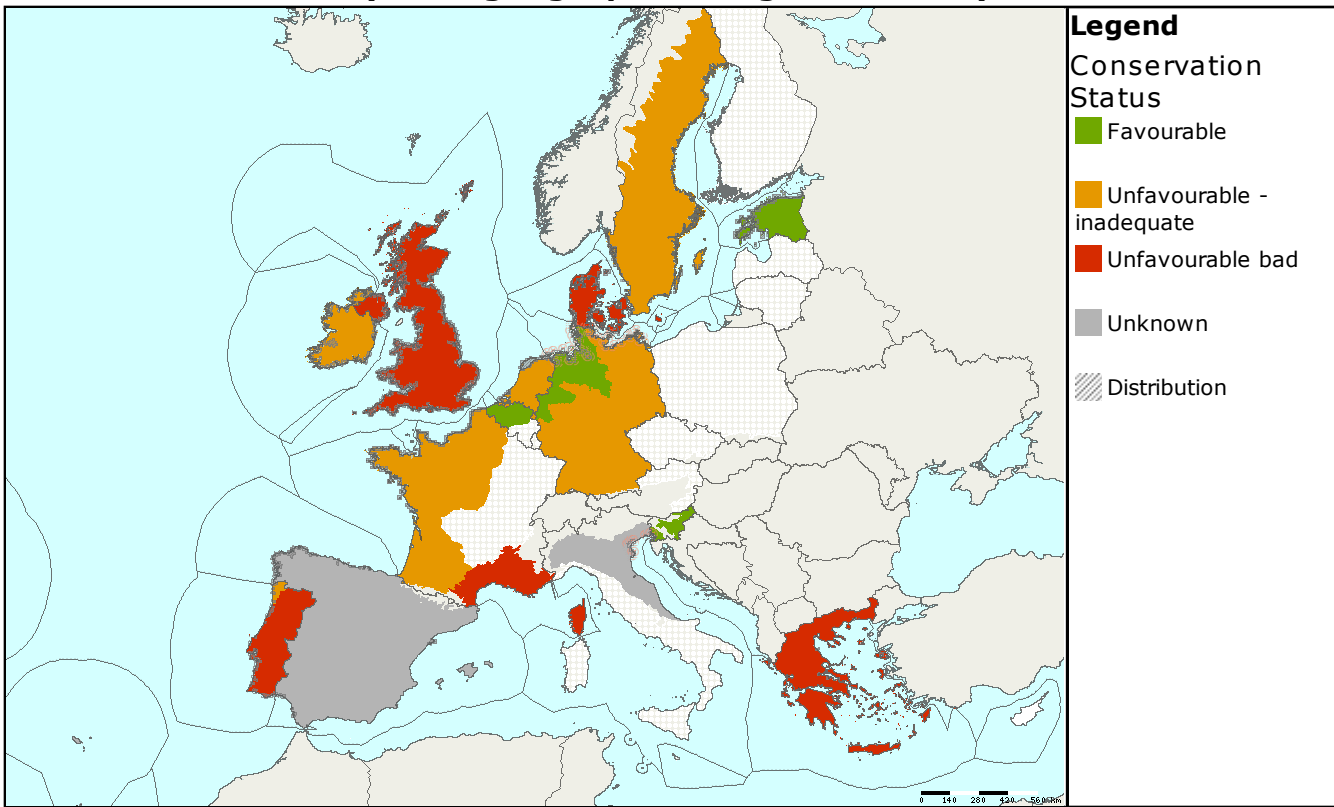

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area
		Range	Area	Structure & function	Future prospects	Overall		
EU25	ATL	Green	Orange	Red	Red	Red	>8770	
EU25	BOR	Green	Green	Orange	Orange	Orange	404	=
EU25	CON	Green	Green	Red	Grey	Red	518	=
EU25	MAC	Grey	Grey	Green	Green	Grey	0.189	X
EU25	MED	Grey	Grey	Red	Grey	Red		

Intertidal mudflats and sandflats are most widespread in the Atlantic region although also found elsewhere. The Baltic form of the habitat only reported from Estonia and Sweden also occurs elsewhere in regions of little tidal amplitude such as the Black Sea. Assessed as unfavourable everywhere except Macaronesia where it is 'unknown', with 'unfavourable-bad' in the Atlantic, Continental & Mediterranean regions and unfavourable-inadequate in the Boreal. These assessments are due to the reported 'structure and function' and Future prospects. Better information is required from the Macaronesian and Mediterranean regions.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area	Data quality
		Range	Area	Structure & function	Future prospects	Overall
