

Habitat code: **1160**  
 Habitat name: **Large shallow inlets and bays**

Habitat group: **coastal habitats**  
 Regions: **MATL MBAL MMAC MMED**

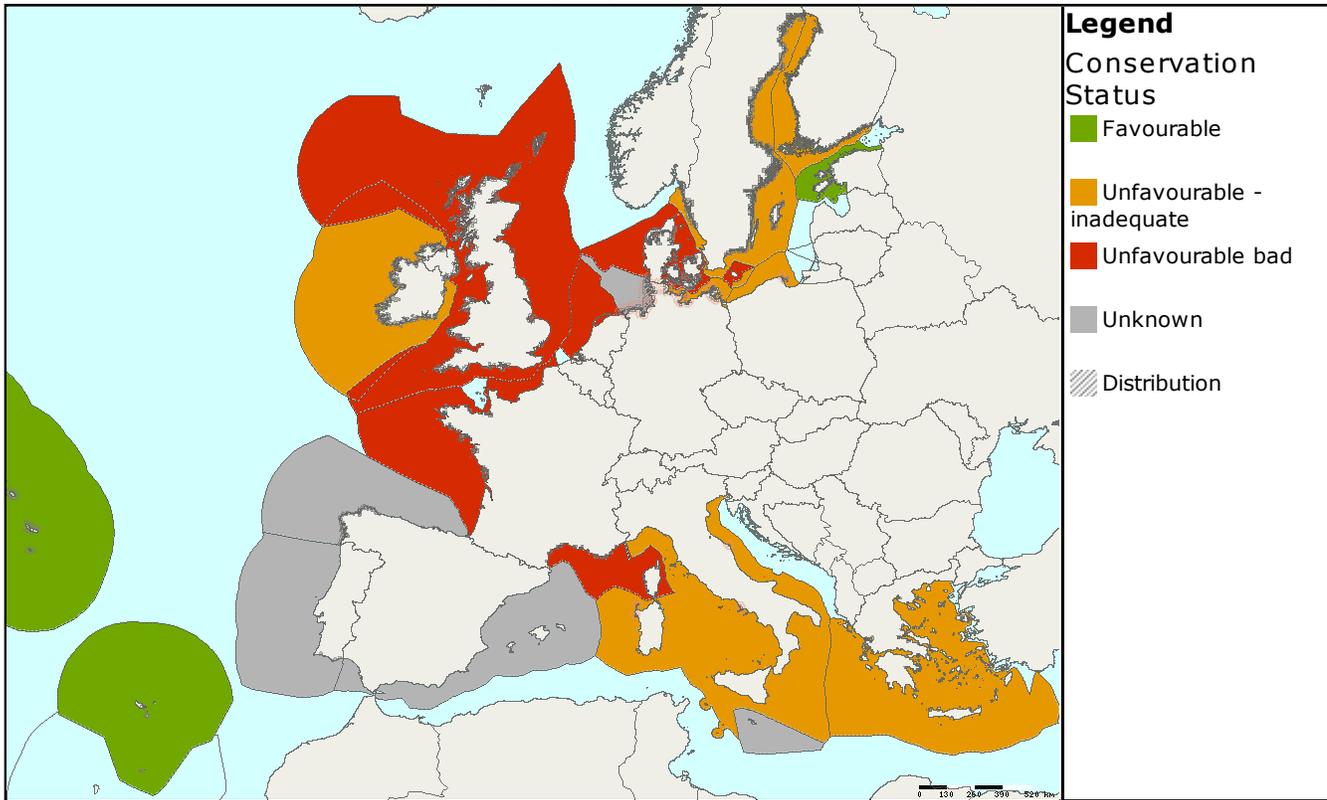

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km <sup>2</sup>	Trend in area
		Range	Area	Structure & function	Future prospects	Overall		
EU25	MATL							
EU25	MBAL							
EU25	MMAC						3072	=
EU25	MMED							

This marine habitat is widespread in all of the European seas. The conservation status is 'unfavourable-inadequate' in the marine Baltic region essentially due to the prevailing 'unfavourable-inadequate' status declared by some Member States for the structure and function and future prospects parameters. The conservation status is 'unfavourable-bad' in the marine Atlantic region essentially due to the prevailing unfavourable-bad status declared by Denmark, France, the Netherlands and the United Kingdom, for the structure and function parameter. In both regions the resulting conservation status is linked to the threats and general habitat degradation which leads to the unfavourable conservation status of typical species of this habitat. The conservation status is 'favourable' in the marine Macaronesian region and based only on the Portuguese report, while in the marine Mediterranean region the assessment is unapplicable because Spain, Cyprus, Slovenia, Greece and Malta did not compile reports/data necessary for the assessment.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km <sup>2</sup>	Trend in area	Data quality
