

Habitat code: **2190**
 Habitat name: **Humid dune slacks**

Habitat group: **dunes habitats**
 Regions: **ATL BOR CON MED**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

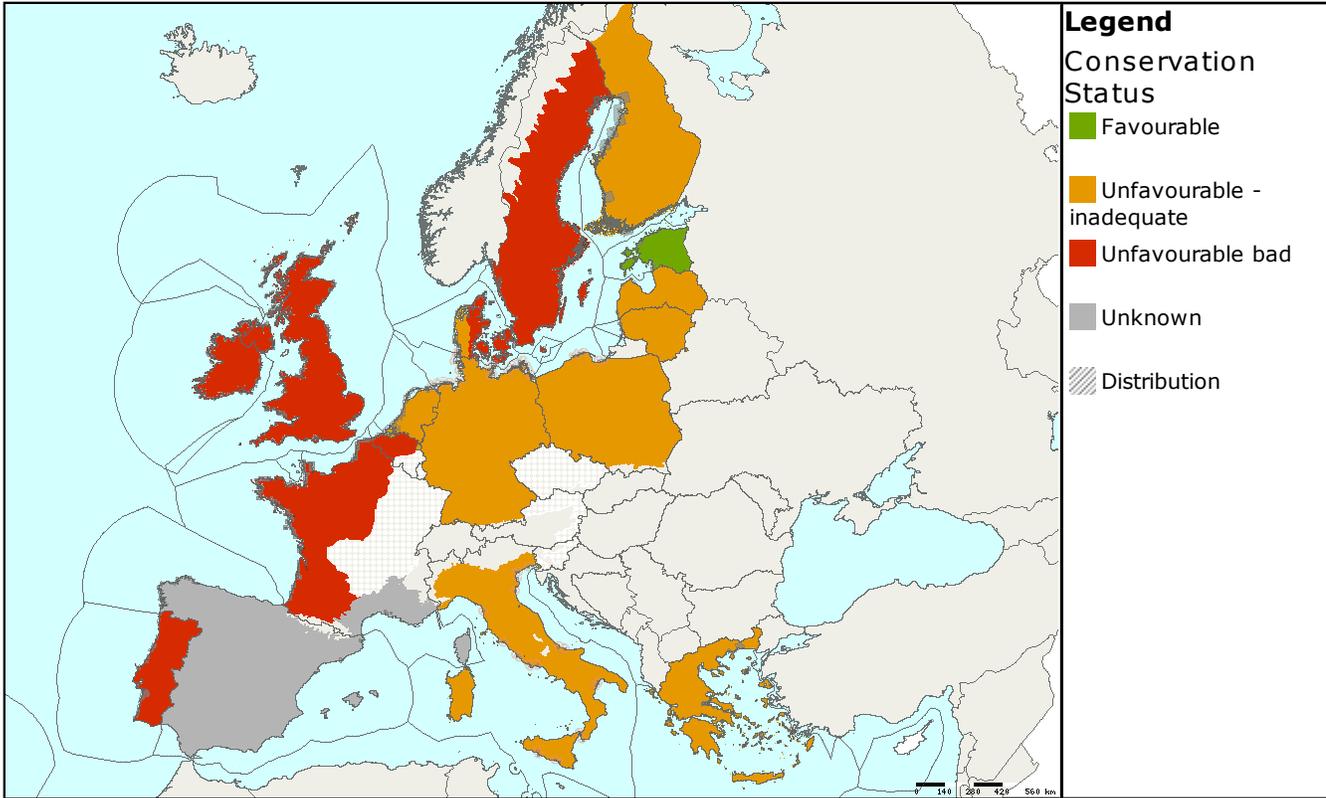

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area
		Range	Area	Structure & function	Future prospects	Overall		
EU25	ATL						>136	-
EU25	BOR						7.31	x
EU25	CON						31	x
EU25	MED						>26	

Wetlands occurring as a part of a dune complex including both open water, fens and wet grasslands which can be species rich with specialised species of plant and animal and are sensitive to changes in water regime. This habitat is found along coastlines throughout the European Union although relatively rare in the Mediterranean.

Range is 'favourable' in all regions except the Mediterranean and in all countries except Greece where it is 'unknown'. However assessed as unfavourable in all regions with 'unfavourable-bad' in the Atlantic, Continental and Mediterranean regions and 'unfavourable-inadequate' in the Boreal region. Only Estonia has assessed this habitat as 'favourable' although Spain and France report 'unknown' for at least one region. Some of the member state assessments, either overall or for individual parameters, have been criticised by NGOs as being too optimistic.

The pressures and threats leading to the unfavourable conservation status are mostly due to human impact, including drainage and tourism-related
