

Habitat code: **2250**
 Habitat name: **Coastal dunes with Juniperus spp.**

Habitat group: **dunes habitats**
 Regions: **ATL CON MED**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area
		Range	Area	Structure & function	Future prospects	Overall		
EU25	ATL	Favourable	Unfavourable - inadequate	Unfavourable bad	Unfavourable bad	Unfavourable bad	0.22	x
EU25	CON	Favourable	Unfavourable bad	Unfavourable - inadequate	Unfavourable - inadequate	Unfavourable bad	7	
EU25	MED	Unknown	Unfavourable - inadequate	Unfavourable - inadequate	Unfavourable - inadequate	Unfavourable - inadequate	>175	

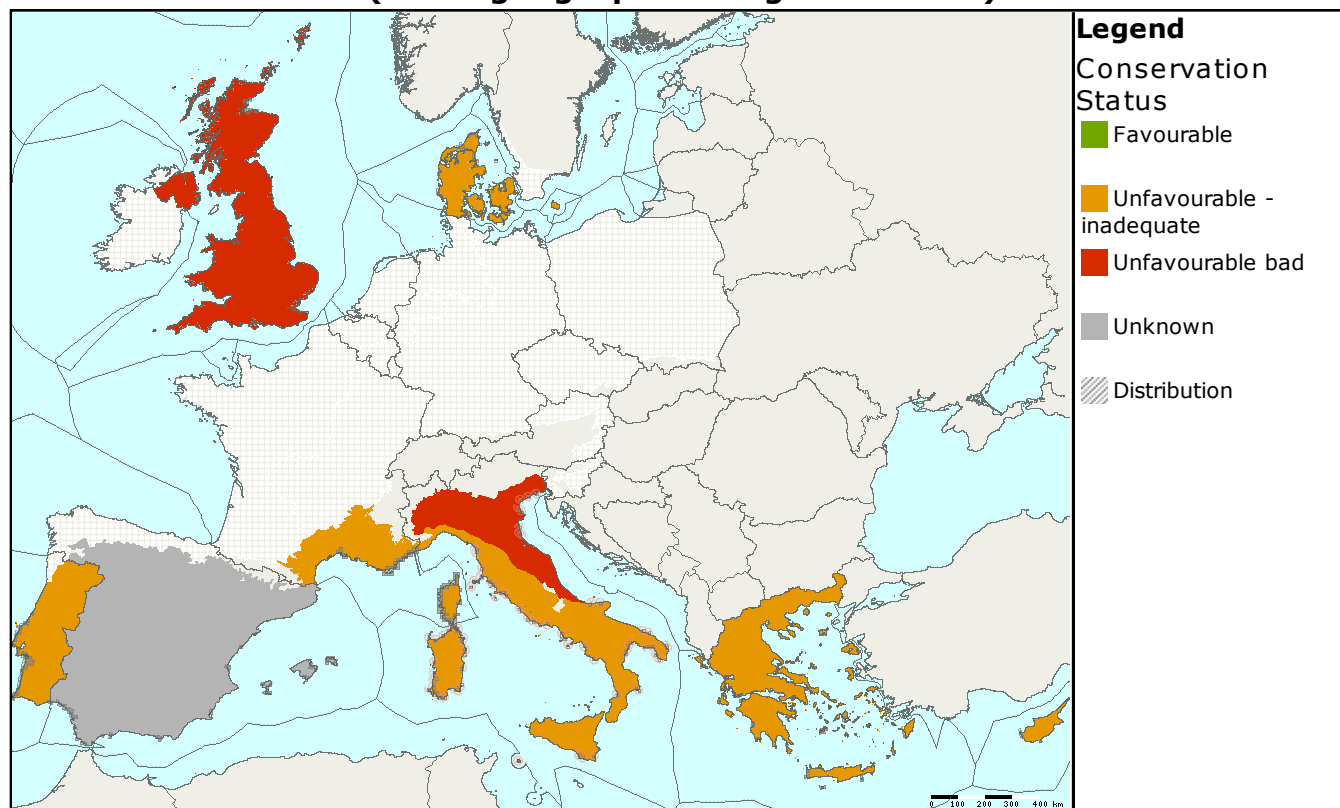

Coastal dunes with various species of juniper (*Juniperus* spp) occur around the coasts of the Iberian Peninsula and the Mediterranean and more locally around Denmark and the United Kingdom.

In the Mediterranean this habitat has been assessed as unfavourable-inadequate for all parameters except range which is unknown. The habitat was more widespread in the past and the pressures and threats are mostly from human impacts. In the part of the Continental region with a Mediterranean coastline (Italy) the habitat is considered 'unfavourable-bad' due to the small area remaining.

In the Atlantic region and the northern part of the Continental region (Denmark) the habitat is dominated by common juniper (*Juniperus communis*) and is a rare and localised habitat and the conservation status is 'unfavourable bad'. Assessed as 'unfavourable-bad' for the Atlantic due to the assessment from the United Kingdom where all parameters except range are reported as 'unfavourable-bad'. In the northern part of the Continental region the habitat is 'unfavourable inadequate' due to 'structure

and function' and 'future prospects'.
 Better information is required from Cyprus, Portugal and especially Spain.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area	Data quality
		Range	Area	Structure & function	Future prospects	Overall			
DK	ATL	Green	Green	Orange	Orange	Orange	0.02	X	2
