Heaths on sandy soils with heather (*Calluna vulgaris*) and crowberry (*Empetrum nigrum*) occurring on the plains of northern Europe in the Atlantic, Boreal and Continental regions. Assessed as 'unfavourable-bad' in all three regions and no country has assessed this habitat as 'favourable' in any region. Within the Atlantic region, Range is assessed as 'unknown' following the assessment from Germany but 'favourable' by the other countries in which it occurs. Many countries note habitat destruction and inappropriate management as responsible for the unfavourable conservation status.
