Old forests composed of oak (*Quercus robur*) and pioneer woody species occurring on the sandy substrates in the lowlands of the Baltic-North Sea plain and of western Europe. The herb layer is composed of acidophilous grasses such as wavy hair grass (*Deschampsia flexuosa*) and purple moor grass (*Molinia caerulea*) and herbaceous plants.

The conservation status is 'unfavourable bad' in the Continental region and 'unfavourable inadequate' elsewhere. Only in Denmark is the habitat in a 'favourable' status. For range and habitat area, Member State assessments are mostly 'favourable', structure and function are 'favourable' only in Denmark and Continental Italy.
