

Habitat code: **91Q0**
 Habitat name: **Western Carpathian calcicolous *Pinus sylvestris* forests**

Habitat group: **forests**
 Regions: **ALP**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area
		Range	Area	Structure & function	Future prospects	Overall		
EU25	ALP						22	+

Calcicolous open pine (*Pinus sylvestris*) forests restricted to a few localities in the western and south-eastern Carpathians. The undergrowth includes a number of species with a continental distribution and xerothermic affinities including many endemic species such as the Annex II and IV plant species *Dianthus nitidus*, *Iris humilis* ssp. *arenaria* and *Pulsatilla slavica*.

The habitat occurs only in the Alpine region. The conservation status is favourable and no major threats were reported. This habitat is of low economic interest, however the herb layer can be threatened by game.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area	Data quality
		Range	Area	Structure & function	Future prospects	Overall			
PL	ALP						0.2016	+	1
SK	ALP						21.62	+	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
