

Habitat code: **9240**
 Habitat name: **Quercus faginea and Quercus canariensis Iberian woods**

Habitat group: **forests**
 Regions: **ALP ATL MED**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

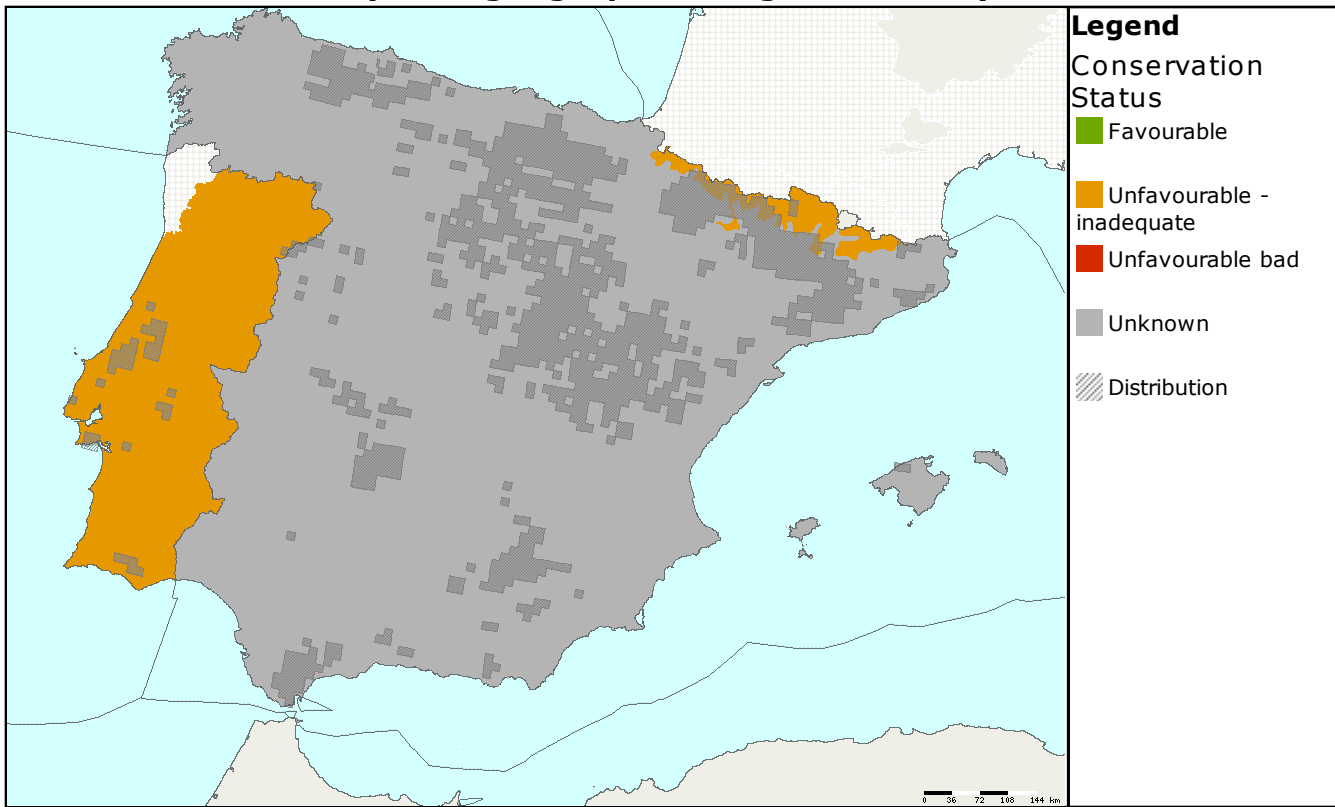

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area
		Range	Area	Structure & function	Future prospects	Overall		
EU25	ALP						79	x
EU25	ATL						57	X
EU25	MED						>2879	

Forests dominated by deciduous or semi-evergreen oaks such as *Quercus faginea* and *Q. canariensis*. Several regional subtypes are described in the Interpretation Manual of European Union habitats.

The conservation status in the Alpine region was assessed as 'unfavourable-inadequate' although the future prospects of this habitat endangered particularly in the higher mountains by forest fires and forestry management were assessed as 'unfavourable bad'. The conservation status in the two other regions, Atlantic and Mediterranean is 'unknown' due to the incomplete information from Spain.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area	Data quality
		Range	Area	Structure & function	Future prospects	Overall			
ES	ALP						78.66	X	3
ES	ATL						56.55	X	3
ES	MED						2879	X	3
PT	MED						N/A	+	

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
