

Habitat code: **9380**  
 Habitat name: **Forests of Ilex aquifolium**

Habitat group: **forests**  
 Regions: **ATL MED**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

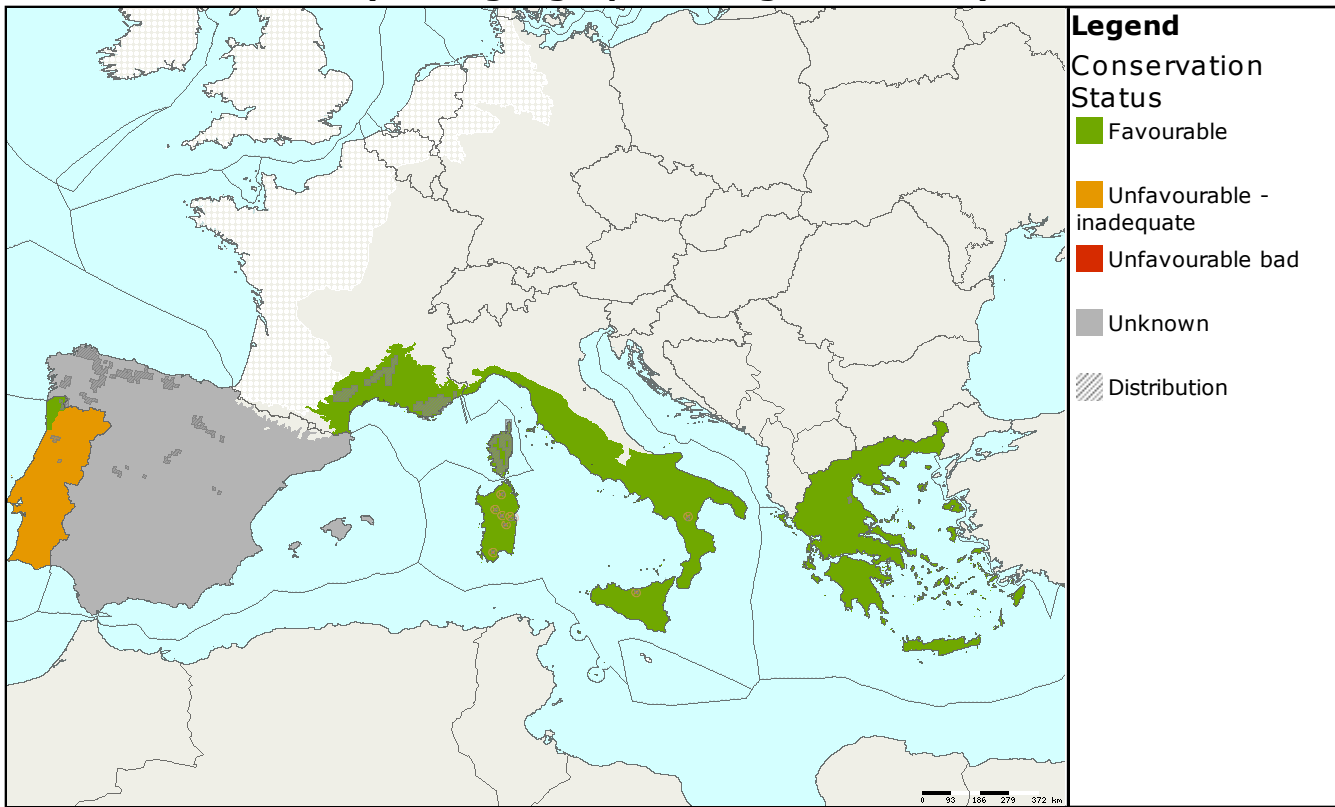

MS	Biogeographic Region	Conservation status assessment					Km <sup>2</sup>	Trend in area
		Range	Area	Structure & function	Future prospects	Overall		
EU25	ATL						>53	=
EU25	MED						>29	

Communities dominated by arborescent holly (*Ilex aquifolium*). These woods correspond to the senescence stage of a forest with an understory of yew (*Taxus baccata*) and holly after the disappearance of the tree layer. They occur in the mountains of the Mediterranean basin and in northern Spain on various soil types.

The conservation status in the Atlantic region is 'unknown' due to the very incomplete report from Spain and in the Mediterranean 'favourable'. Assessed as 'favourable' in all the countries where present in the Mediterranean region except Portugal, where the status of the habitat is 'unfavourable-inadequate' and Spain where it is 'unknown'.

Better information required from Spain.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km <sup>2</sup>	Trend in area	Data quality
		Range	Area	Structure & function	Future prospects	Overall			
ES	ATL						53.02	=	2
PT	ATL						N/A	=	
EL	MED						2	=	1
ES	MED						N/A	X	
FR	MED						10	=	2
IT	MED						17	=	2
PT	MED						N/A	-	

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
