

Habitat code: **93A0**
 Habitat name: **Woodlands with Quercus infectoria (Anagyro foetidae-Quercetum infectoriae)**

Habitat group: **forests**
 Regions: **MED**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area
		Range	Area	Structure & function	Future prospects	Overall		
EU25	MED						4.5	X

Woods with Aleppo oak (*Quercus infectoria*) constitute the potential natural vegetation of limestone and marly limestones of the Troodos Mountains of Cyprus. The habitat occurs mainly at higher altitudes of the Thermo-Mediterranean and in the meso-mediterranean zone, but recently regeneration of this habitat has been recorded in agricultural areas in the lower altitudes.

The habitat is endemic to Cyprus. The conservation status is 'unfavourable-inadequate' although the reference values for the range and the habitat area are unknown. However, the expansion of urban areas throughout Cyprus represents a major threat.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area	Data quality
		Range	Area	Structure & function	Future prospects	Overall			
CY	MED						4.5	X	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
