

Habitat code: **9520**
 Habitat name: **Abies pinsapo forests**

Habitat group: **forests**
 Regions: **MED**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area
		Range	Area	Structure & function	Future prospects	Overall		
EU25	MED						12	

Forests of Spanish fir (*Abies pinsapo*) which are endemic to the mountains of Andalucía. The habitat occurs on outcrops of serpentine and is associated with several other endemic plant taxa such as *Daphne laureola ssp latifolium*, *Berberis vulgaris ssp australis*, *Paeonia broteroi* and *P. coriacea*.

The conservation status is 'unknown'; information on the status of the population and the threats is not available or is very scarce. Better information is required to make a comprehensive assessment.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area	Data quality
		Range	Area	Structure & function	Future prospects	Overall			
ES	MED						12.24	N/A	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
