This habitat includes two sub types which can occur separately or together; aquatic and amphibious vegetation with perennial plants such as shoreweed (*Littorella uniflora*) and bog pondweed (*Potamogeton polygonifolius*) and amphibious vegetation with annual plants. Widespread in northern Europe in the Alpine, Atlantic, Boreal, Continental and Pannonic regions, present but rare in the Mediterranean region. Not reported from Spain where similar vegetation has probably been included in habitat type 3110.

Assessed as 'favourable' for the Alpine but unfavourable in all other regions with 'unfavourable-bad' for the Atlantic and Continental regions. In these two regions only Poland has assessed this habitat as 'favourable'. A wide range of threats and pressures are reported including drainage and pollution.
