| EU25 | ATL | Red | Red | Red | Orange | Red | 1949 grids | |

The European tree frog is widespread. It is usually associated with open broad-leaved and mixed forests, bush and shrub lands, but can be found in meadows, gardens, vineyards, orchards, parks and low riparian vegetation. Major pressures are habitat loss and fragmentation, pollution of waters and collecting for pet trading.

The overall regional assessments are 'unfavourable' for all six regions where species occurs. It is 'unfavourable-inadequate' for Alpine, Continental, Mediterranean and Pannonian regions and 'unfavourable-bad' for Boreal and Atlantic regions. However, assessments for some countries are 'favourable', such as for Latvia, Italy and Greece, and for some are improving or have good future prospects (Poland, Portugal, Denmark and Sweden).

According to IUCN the species is classified as 'least concern'.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

| MS | Region | Conservation status assessment | | | | | Size&unit | Population trend | Data quality |
