Regions: **CON**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	CON						16 grids	X

The Dalmatian wall lizard ranges from north-eastern Italy, through south-western Slovenia, coastal Croatia, southern Bosnia-Herzegovina, coastal Montenegro to north-western Albania. It is present on many Adriatic islands. It is found in dry open woodland, scrub, pastures and overgrown areas. It can be found on cliffs, rocks and stone walls. The species is only reported by Italy and Slovenia and its overall status of conservation is assessed as "unfavourable-inadequate" with all parameters reported as "unknown" by Italy. Listed as Least Concern" by IUCN in view of its wide distribution, tolerance of a degree of habitat modification and presumed large population.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
IT	CON						3 - 8 grids	X	2
SI	CON						N/A x	X	3

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
