

Species name: **Podarcis taurica**  
Annex: **IV**

Species group: **Amphibians & Reptiles**  
Regions: **MED PAN**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

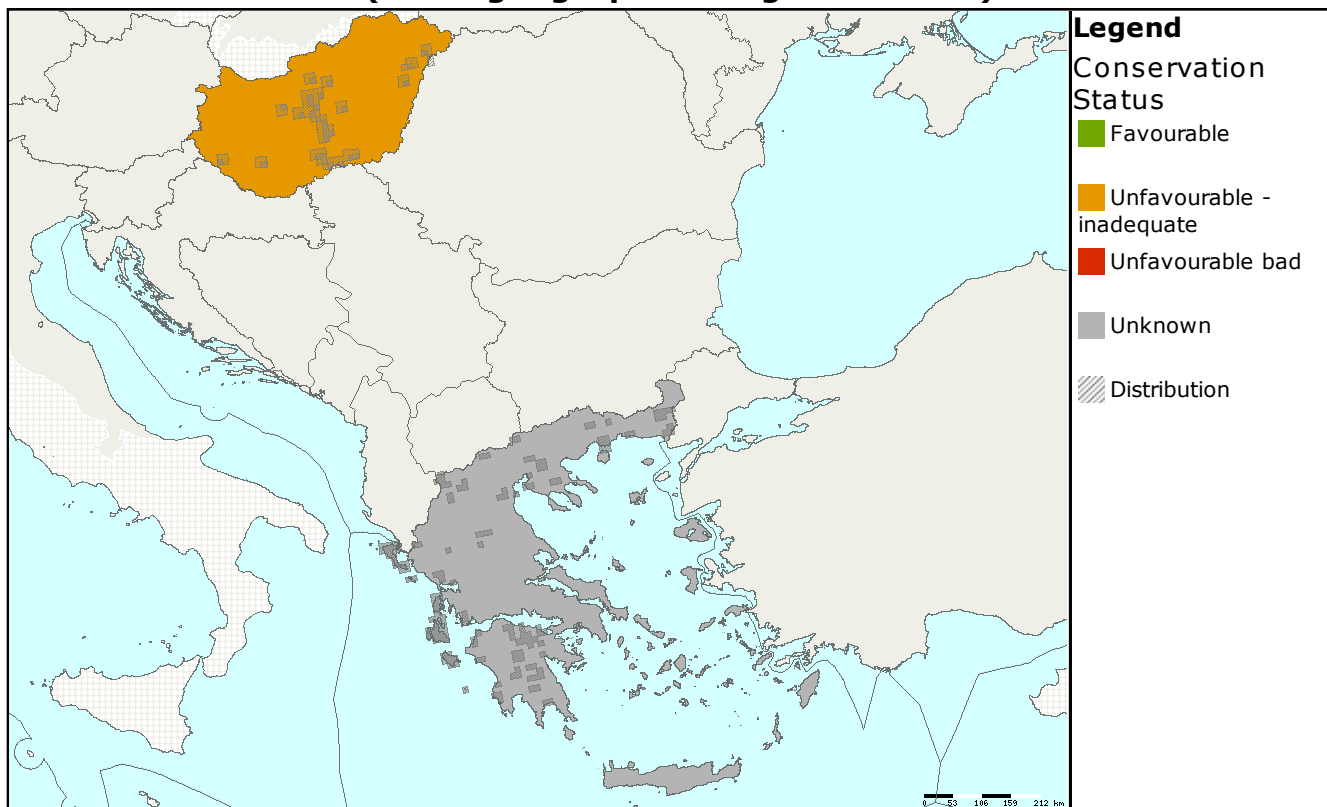

| MS   | Region | Conservation status assessment |            |         |                  |         | Population size & unit | Population Trend |
|------|--------|--------------------------------|------------|---------|------------------|---------|------------------------|------------------|
|      |        | Range                          | Population | Habitat | Future prospects | Overall |                        |                  |
| EU25 | MED    |                                |            |         |                  |         |                        | X                |
| EU25 | PAN    |                                |            |         |                  |         | 47 - 50 loc.           | X                |

The Balkan wall lizard is a species occurring in the south-eastern Europe and along the Black Sea. Its natural range extends northwards to the Pannonian basin. It is relatively common in the southern part of its natural range mainly in Greece. It inhabits various types of grasslands with low vegetation and it is characterised by high seasonal colour adaptation.

The conservation status in the Pannonian biogeographical region is 'unfavourable inadequate' due to the 'unfavourable inadequate' Future prospects. Here the species reaches the northern margin of its natural distribution. Beside that the habitat of the species is negatively affected by succession and overgrazing. The conservation status in the Mediterranean biogeographical region is 'unknown'.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

| MS | Region | Conservation status assessment |            |         |                  |         | Size&unit       | Population trend | Data quality |
|----|--------|--------------------------------|------------|---------|------------------|---------|-----------------|------------------|--------------|
|    |        | Range                          | Population | Habitat | Future prospects | Overall |                 |                  |              |
| EL | MED    |                                |            |         |                  |         | 155 - 155 grids | X                | 3            |
| HU | PAN    |                                |            |         |                  |         | 47 - 50 loc.    | X                | 2            |

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
