

Species name: **Ophiomorus punctatissimus** Species group: **Amphibians & Reptiles**  
 Annex: **IV** Regions: **MED**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED							X

The Limbless Skink occurs in southern Greece and in south-western Turkey. The range is estimated, being based upon published data, but it is expected to be larger. The skink is also known from several other islands in the Aegean Sea. It is associated mostly with open areas and it can be found mainly in grasslands.

The conservation status is 'unfavourable inadequate', which is due to the 'inadequate' status of future prospects. Other parameters are 'unknown'. The information on this in general poorly known species is incomplete.

**Assessments of conservation status as reported by Member states  
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
EL	MED						6 - (6) grids	X	3

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
