The Moor frog is native to Europe and Asia. They have a preference for meadows and bogs.

It occurs in many geographical regions. In the Alpine and Boreal region its conservation status is 'favourable'. In the Atlantic, Continental and Pannonian region its conservation status is 'inadequate', although within these regions it sometimes has the status of 'favourable'. The conservation status in France is 'bad' (which might be because France is considered to constitute the western boundary of the habitat. Who is proposing the change. It is proposed to change the Polish conservation status from 'favourable' to 'unfavourable-inadequate' due to the continuously degrading habitat quality. The IUCN conservation status is 'Least Concern'.
