

Species name: **Triturus italicus**  
Annex: **IV**

Species group: **Amphibians & Reptiles**  
Regions: **ALP CON MED**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP							X
EU25	CON							=
EU25	MED							-

The Italian newt is found through most of central and southern Italy, with higher concentrations at lower altitudes. It is often associated with woodland and agricultural habitats. The species is only reported by Italy. Its status of conservation is "unfavourable-inadequate" for Continental and Mediterranean regions. For the Alpine region the assessment is "unknown", as all individual parameters are. Listed as "Least Concern" by IUCN in view of its relatively wide distribution and tolerance of a broad range of habitats.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
IT	ALP						5 - 8 grids	X	3
IT	CON						13 - 17 grids	=	2
IT	MED						191 - 244 grids	-	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
