

Species name: **Anaecypris hispanica**
Annex: **II, IV**

Species group: **Fish**
Regions: **MED**

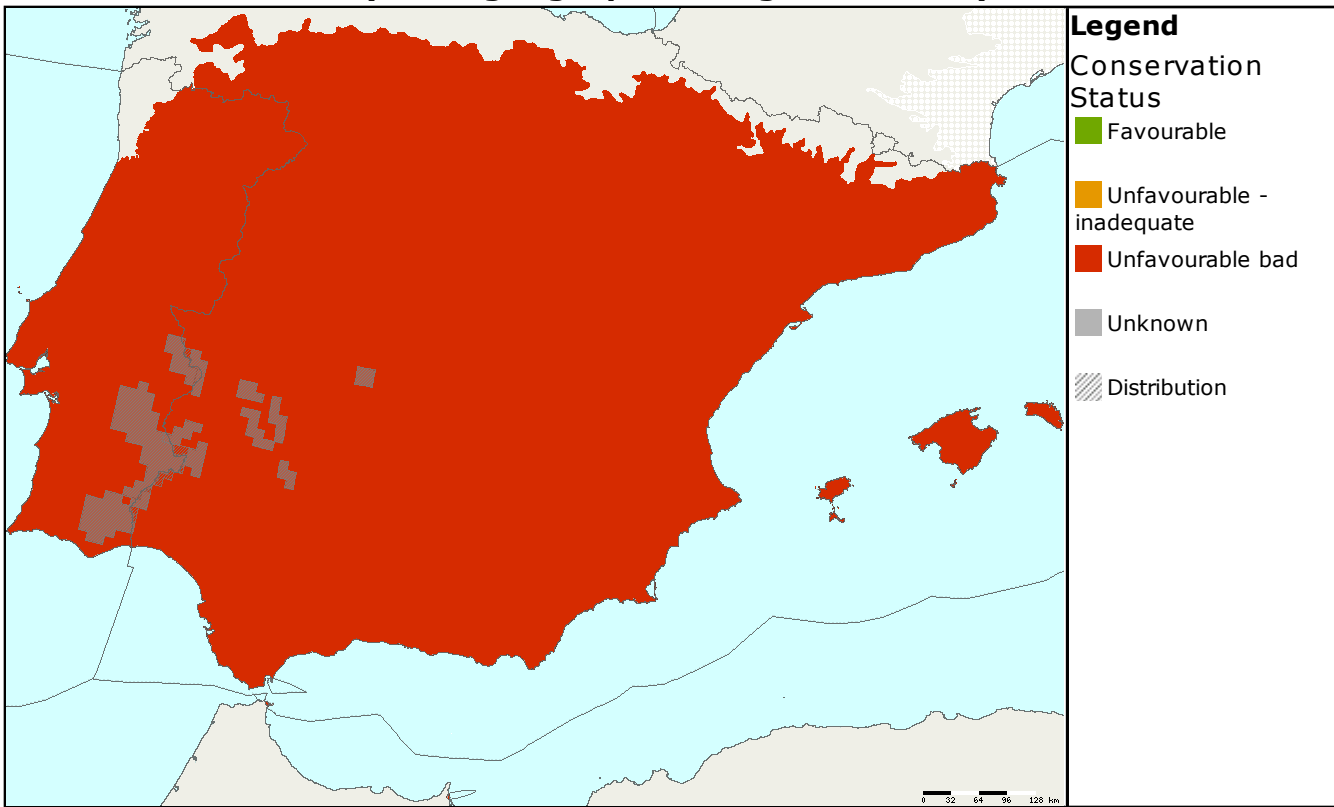

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED						138 grids	

Anaecypris hispanica is a freshwater fish species, endemic of the Guadiana basin. It has an 'unfavourable-bad' conservation status in the Mediterranean region. Main threats include introduced fish species, extraction of sand and gravel, water pollution and hydraulic infrastructures like dams. According to IUCN species is considered as 'endangered' due to decline and fragmentation of its population.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
ES	MED						46 - 46 loc.	X	
PT	MED						10000 - (10000) indiv.	-	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
