

Species name: **Cobitis trichonica**
Annex: **II**

Species group: **Fish**
Regions: **MED**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED						41 - 137 area	=

MED: A short-lived species which occurs in lakes and lowland water courses with little current. Endemic to Greece. It is threatened due to water abstraction. Its overall assessment is "favourable" because species was evaluated in 3 parameters as "favourable" and only state of its habitat is "unknown".

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
EL	MED						41 - 137 area	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
