

Species name: **Salmo marmoratus**  
Annex: **II**

Species group: **Fish**  
Regions: **ALP CON**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						79 grids	-
EU25	CON						65 grids	-

The Marble Trout is a rare freshwater fish. Its natural range spread from southern Switzerland over the northern Italy and Adriatic basin. The most southern records come from Albania. It occurs over sandy and gravelly bottoms of running or standing clean and cold waters.

The conservation status in both the Continental and the Mediterranean biogeographical regions is 'unfavourable inadequate'. Although the species is according to the 2008 IUCN Red List of 'least concern', the population size is decreasing in both biogeographical regions. The introduction of the other trout species may lead to the decrease of the population size, but despite this no major threats to the species or its habitat were recorded.

**Assessments of conservation status as reported by Member states  
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
IT	ALP						61 - 61 grids	-	2
SI	ALP						18 - (18) grids	+	1
IT	CON						47 - 47 grids	-	2
SI	CON						18 - (18) grids	-	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
