

Species name: **Carabus zawadzskii**  
Annex: **II, IV**

Species group: **Invertebrates**  
Regions: **ALP CON PAN**

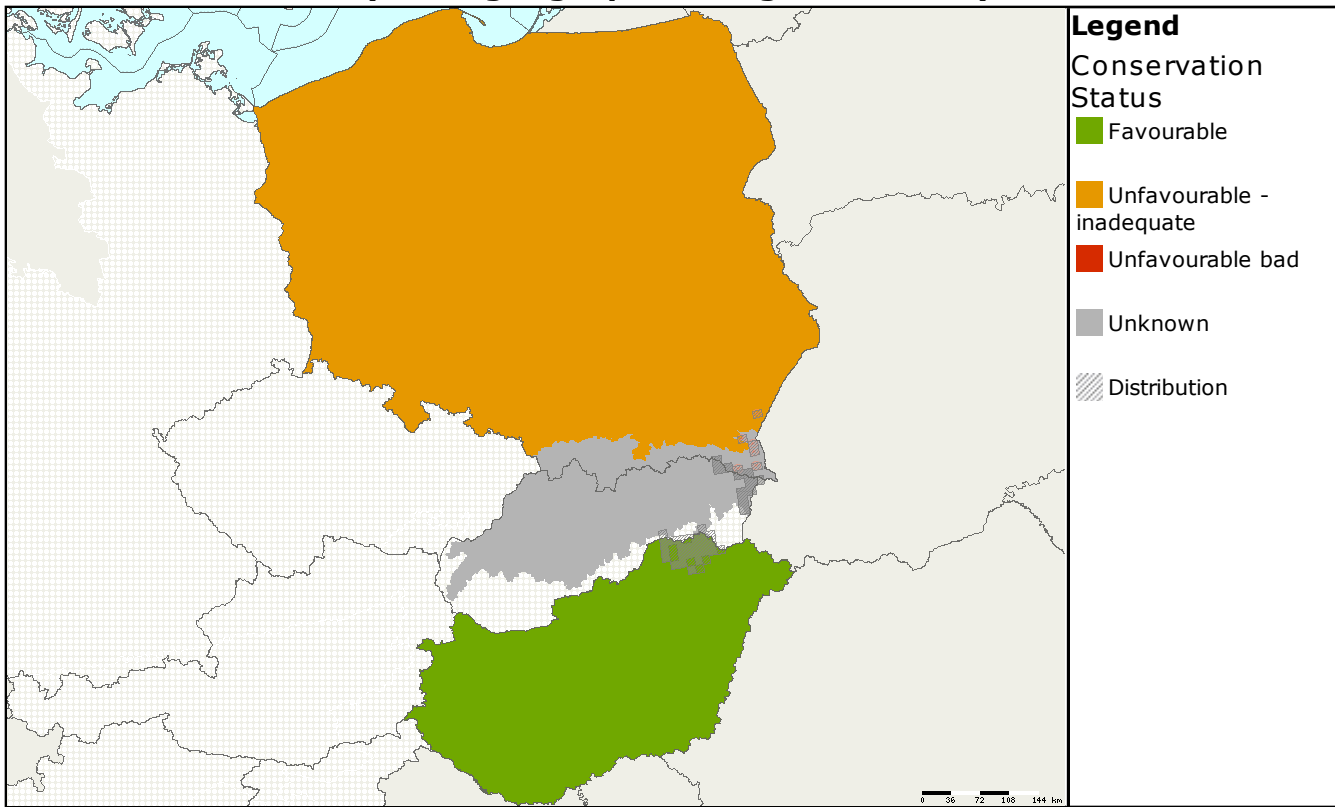

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						20 grids	X
EU25	CON						2 loc.	X
EU25	PAN						20 - 30 loc.	X

The *Carabus zawadzskii* is a beetle species which occurs in Hungary, Poland and Slovakia. Deficient data from Poland and Slovakia have resulted in an ‘unknown’ and ‘inadequate’ overall assessment for the Alpine and Continental region respectively. This beetle species has a considerable amount of its habitat range in Hungary, where it is performing well. This has resulted in a ‘favourable’ status for the Pannonian region.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
PL	ALP						(5) - 5 loc.	X	3
SK	ALP						12 - 16 x	X	3
PL	CON						2 - 2 loc.	X	3
HU	PAN						20 - 30 loc.	X	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
