

Species name: **Catopta thrips**
Annex: **II, IV**

Species group: **Invertebrates**
Regions: **MED PAN**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

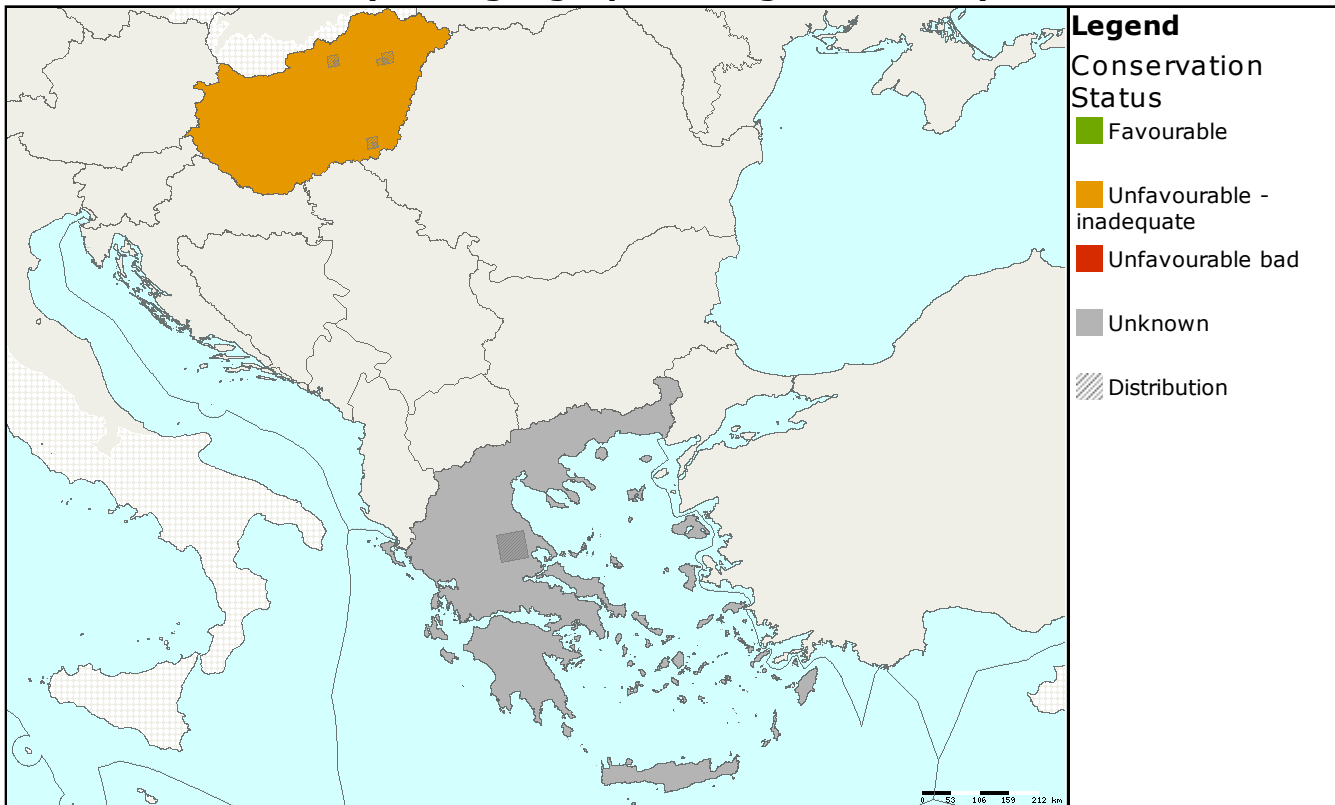

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED							X
EU25	PAN						3 - 7 loc.	=

A ponto-caspian moth species. In the Western Europe it occurs in the Carpathian basin and in the Balkan Peninsula. Within the EU it is known as well from Romania and Bulgaria. It is a steppe species. In Europe it occurs in exclaves of open steppe vegetation on sands or loess and in xerophilous grasslands on alkaline substrates.

The conservation status in the Pannonian biogeographical region is 'unfavourable inadequate'. Although the range area and the population size are stable they are not sufficient to ensure long-term viability. The unique populations are relatively small and isolated, tied to the islands of steppe vegetation usually surrounded with an arable land. The conservation status in the Mediterranean biogeographical region is 'unknown', information

provided is insufficient.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
EL	MED						1 - (1) x	X	3
HU	PAN						3 - 7 loc.	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
