

Species name: **Coenonympha hero**
Annex: **IV**

Species group: **Invertebrates**
Regions: **ALP ATL BOR CON**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

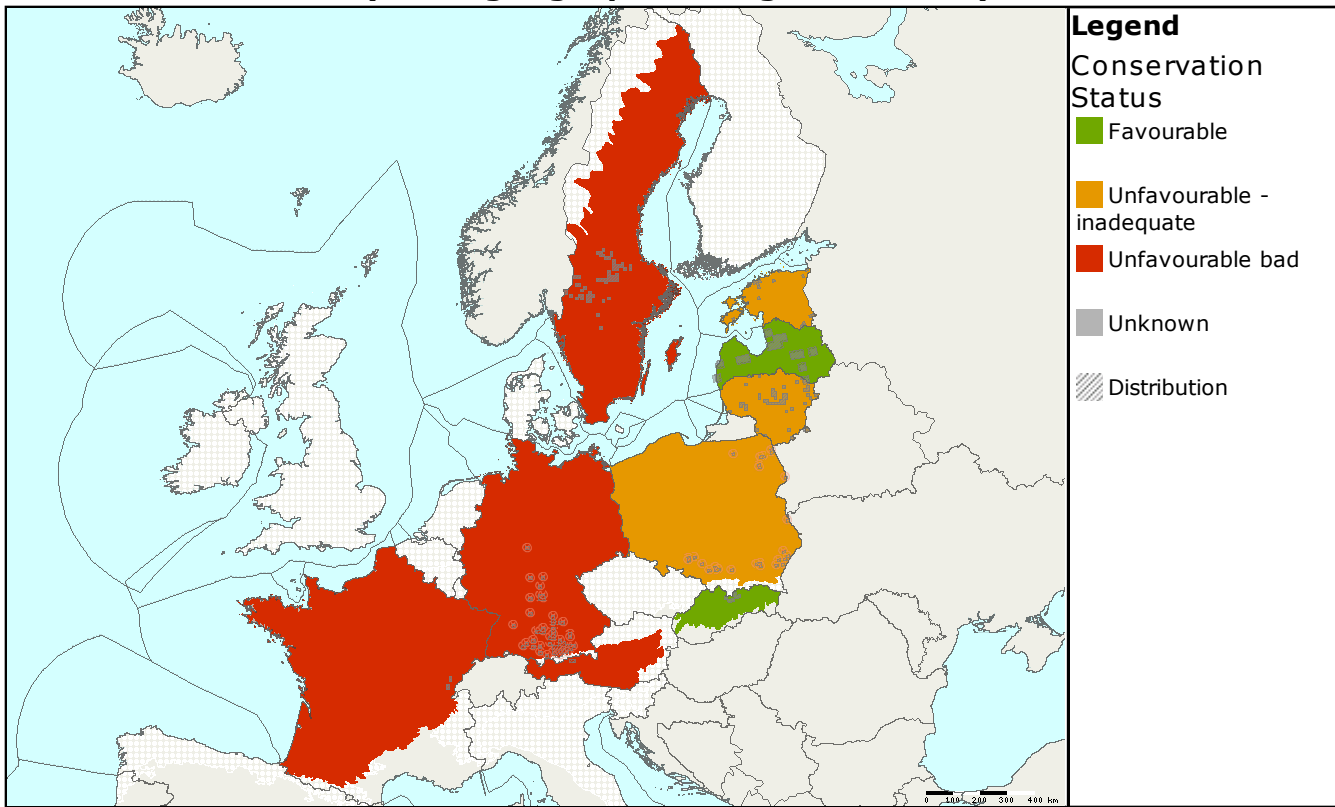

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						8 - 10 loc.	
EU25	BOR						237 grids	-
EU25	ATL						2 N grids	
EU25	CON						> 113 grids	

The scarce heath is a butterfly lives in central Europe and Scandinavia. They fly in one generation from May to July.

For Alpine biogeographical region the species is reported by Austria and Slovakia. Its overall assessment is 'favourable' because it was evaluated in all 4 parameters as 'favourable' for more than 94% of its population. In other regions it is not doing so well with overall assessments of 'unfavourable-bad' for Boreal, Atlantic and Continental regions. Only in Latvia it was reported as 'favourable'.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
AT	ALP						- 1 loc.	X	3
SK	ALP						8 - 9 loc.	=	2
DE	ATL						1 - (1) loc.	-	1
FR	ATL						N/A indiv.	-	3
EE	BOR						18 - 18 grids	=	3
LT	BOR						50 - 60 loc.	=	2
LV	BOR						14 - 14 loc.	=	3
SE	BOR						150 - 250 loc.	-	2
DE	CON						84 - (84) loc.	-	2
FR	CON						N/A indiv.	X	3
PL	CON						30 - 30 loc.	X	1
SE	CON						N/A loc.	-	1

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
