The *Graphoderus bilineatus* is a water beetle species which is widely spread across Europe. It is dependent on freshwaters.

In most geographical regions (Alpine, Atlantic, Pannonian) its overall status is 'bad'. However, in the Boreal and Continental region its status is 'favourable'. In general it seems that this species is doing well in the northern European countries while in most others it is doing very badly. The IUCN conservation status is 'vulnerable', but needs to be updated.
