

Species name: **Mesosa myops**  
Annex: **II**

Species group: **Invertebrates**  
Regions: **BOR CON**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	BOR	Unfavourable - inadequate	Unfavourable - inadequate	Favourable	Unfavourable - inadequate	Unfavourable - inadequate	1 - 3 loc.	-
EU25	CON	Unfavourable bad	Unfavourable bad	Unfavourable - inadequate	Unfavourable - inadequate	Unfavourable bad	1 loc.	X

A beetle species with Euro-Siberian distribution. The distribution of the species reaches its western boundary in the northern and eastern Europe. Within the EU it was known as well from Latvia and southern Sweden. In the European part of the range the species occurs in deciduous and mixed forests preferably on wet stands. Its life cycle is linked with standing dead wood.

The conservation status in the Boreal biogeographical region is 'unfavourable inadequate' and in the Continental 'unfavourable bad'. In the last decades the species has been on decline, which maybe connected to the marginal position of the populations and to the habitat deterioration, which results mainly from inappropriate forestry practices.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
FI	BOR						1 - 3 loc.	-	2
PL	CON						1 - 1 loc.	X	3

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
