

Species name: **Phyllometra culminaria**
Annex: **II, IV**

Species group: **Invertebrates**
Regions: **PAN**

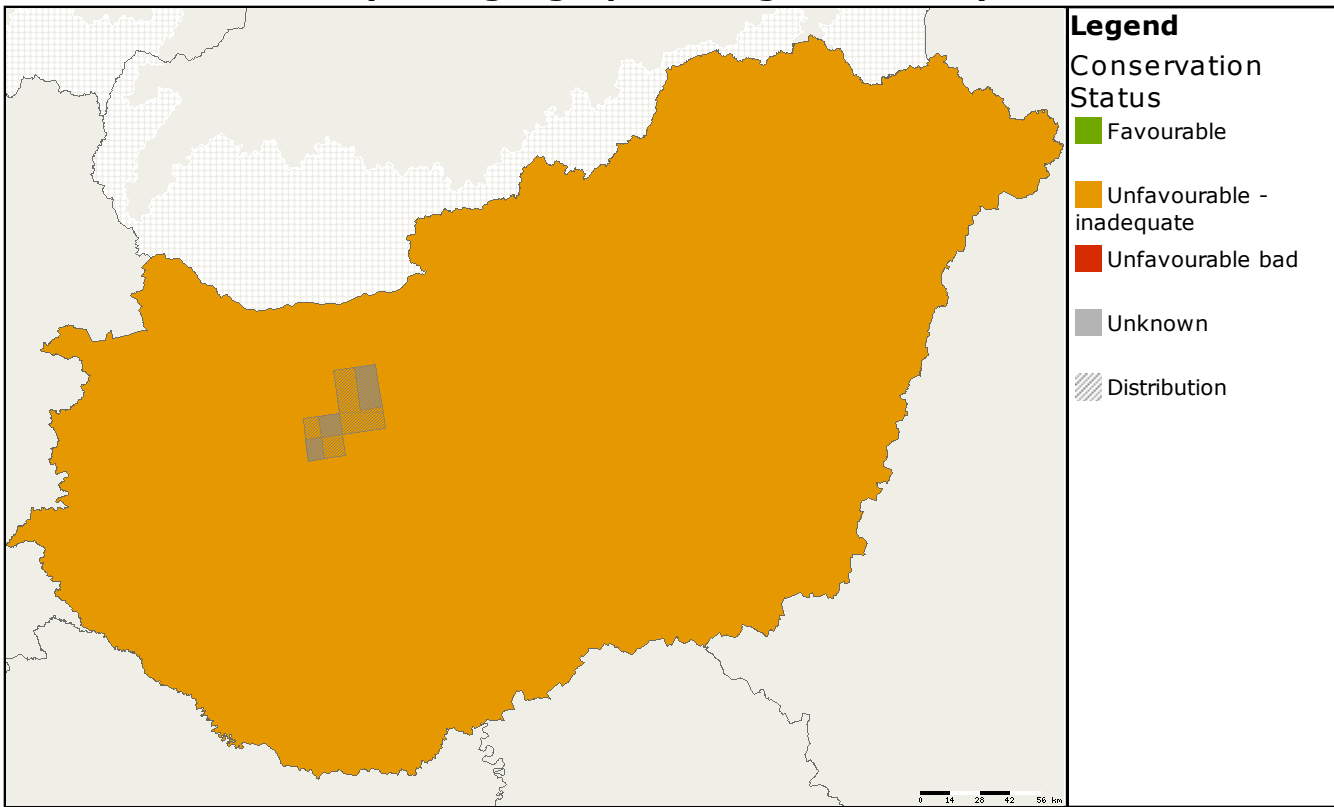

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	PAN						600000 - 900000 indiv.	+

PAN: Occurrence of species is reported within the Pannonian region only by Hungary . Assessment of range and habitat resulted into "favourable" status and future prospect is "unknown". Due to assessment of population, which is "inadequate", overall assessment is "inadequate" too, the evaluation of population is not clear and might be changed to "favourable" (positive trend, reference value is the same as top value for size).

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
HU	PAN						600000 - 900000 indiv.	+	2

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
