

Species name: **Polyommatus eroides**
Annex: **II, IV**

Species group: **Invertebrates**
Regions: **CON MED**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

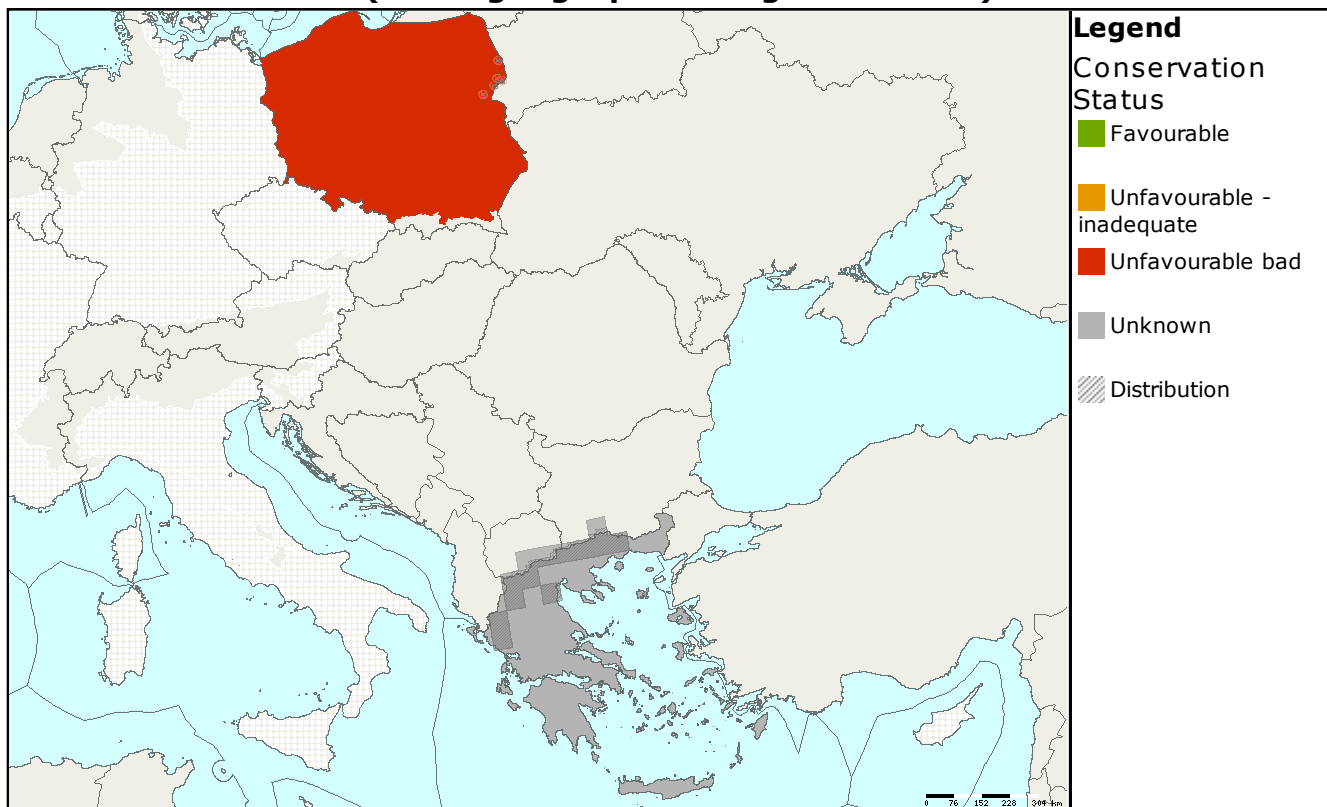

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	CON						6 loc.	-
EU25	MED							X

An euro-siberian butterfly species. Its natural range spreads from the central and the eastern Europe and Balkan, over Asia Minor to western Siberia. In EU it occurs as well in Bulgaria and Slovakia. It is considered extinct in Czech Republic. Within the European part of the range the species occurs in dry, rocky or sandy grasslands, steppes, forests fringes or light open forests.

The conservation status in the Continental biogeographical region is 'unfavourable bad'. Here the species reaches north-western margin of its natural distribution. It is extinct in several locations and remaining populations are small and isolated. In the Mediterranean biogeographical region the status is 'unknown'. In the European scale the species is considered 'endangered'.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
PL	CON						6 - 6 loc.	-	1
EL	MED						25 - (25) x	X	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
