

Species name: **Theodoxus transversalis**
Annex: **II, IV**

Species group: **Invertebrates**
Regions: **CON PAN**

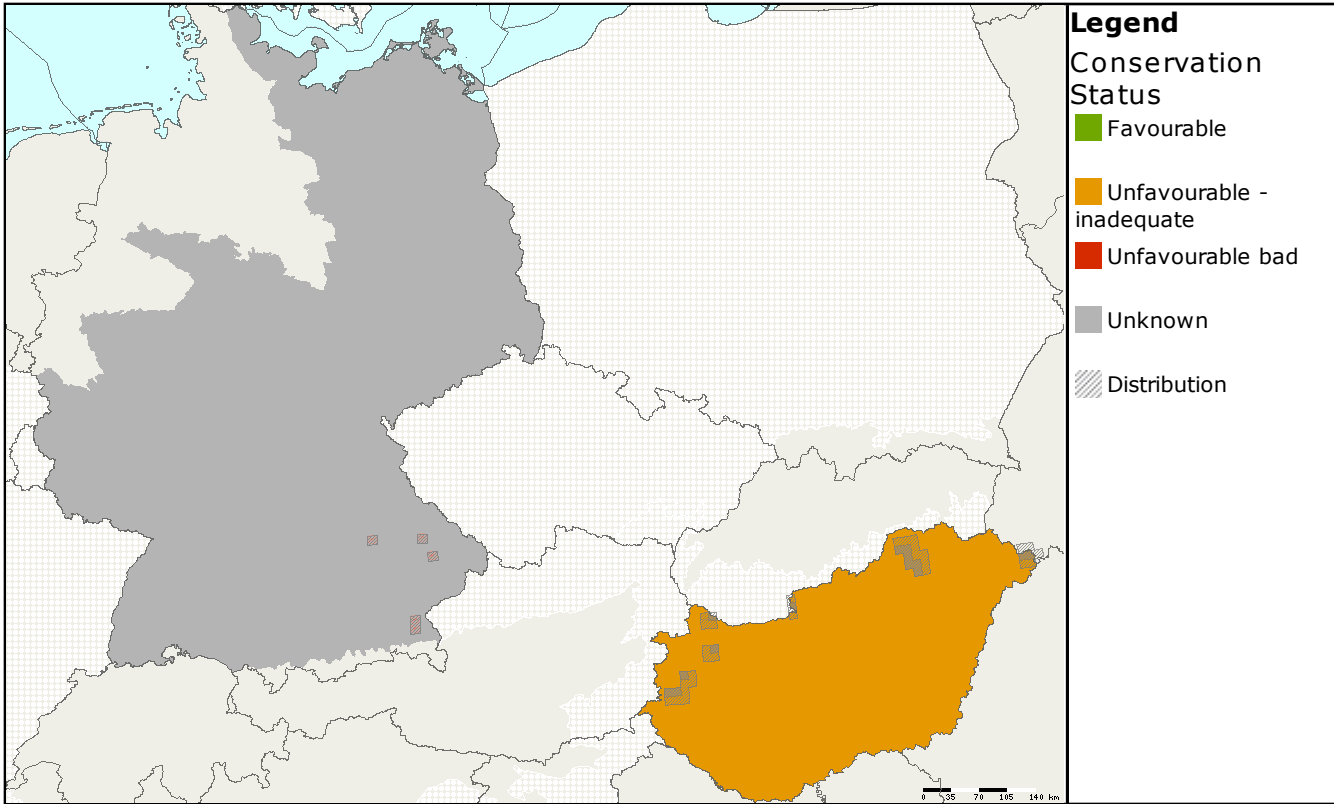

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	CON							X
EU25	PAN						10000000 - 150000000 indiv.	X

An aquatic gastropod mollusc occurring mainly in the Danube river and lower parts of its tributaries. Several references note its presence as well in the Dniester river system. Within the EU it occurs as well in Bulgaria and Romania and it is probably extinct in Austria and Slovakia. The species prefers big rivers with stony bottoms. The conservation status in the Continental biogeographical region is 'unknown'. In the Pannonian biogeographical region it was assessed as 'unfavourable inadequate' due to decrease in the range and the habitat area. These negative trends result mainly from the industrial and agricultural water pollution and negative interactions with introduced alien species.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
DE	CON						5 - (5) x	X	3
HU	PAN						10000000 - 150000000 indiv.	X	2

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
