

Species name: **Lindenia tetraphylla**
Annex: **II, IV**

Species group: **Invertebrates**
Regions: **MED**

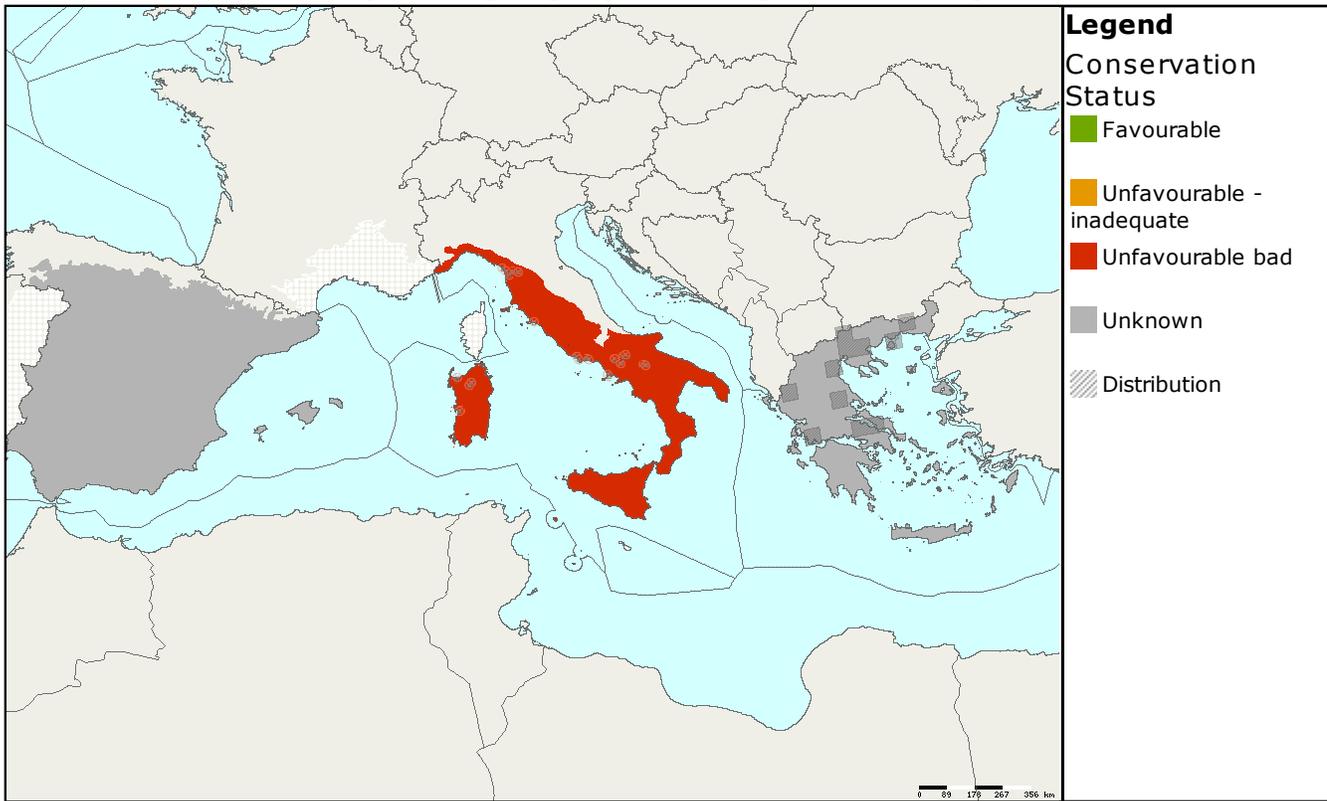

Assessments of conservation status at the European level (all biogeographical regions - EU25)

| MS | Region | Conservation status assessment | | | | | Population size & unit | Population Trend |
|------|--------|--------------------------------|------------|---------|------------------|---------|------------------------|------------------|
| | | Range | Population | Habitat | Future prospects | Overall | | |
| EU25 | MED | | | | | | > 279 grids | |

The bladetail (*Lindenia tetraphylla*) is a dragonfly with patchy distribution, mostly in Greece, Montenegro and Turkey, but also in North Africa. Species was reported for Mediterranean region by Greece, Spain and Italy with the majority of distribution area in Greece (more than 90%). Overall assessment is influenced by Greek report resulting 'unknown' conclusion. Most of the data about the species is missing (Greece and Spain), while the Italian report is 'unfavourable-bad'.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

| MS | Region | Conservation status assessment | | | | | Size&unit | Population trend | Data quality |
|----|--------|--------------------------------|------------|---------|------------------|---------|--------------|------------------|--------------|
| | | Range | Population | Habitat | Future prospects | Overall | | | |
| EL | MED | | | | | | 12 - (12) x | X | 2 |
| ES | MED | | | | | | N/A x | X | |
| IT | MED | | | | | | 27 - 48 loc. | - | 2 |

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
