

Species name: **Barbastella barbastellus**
 Annex: **II, IV**

Species group: **Mammals**
 Regions: **ALP ATL BOR CON MAC MED PAN**

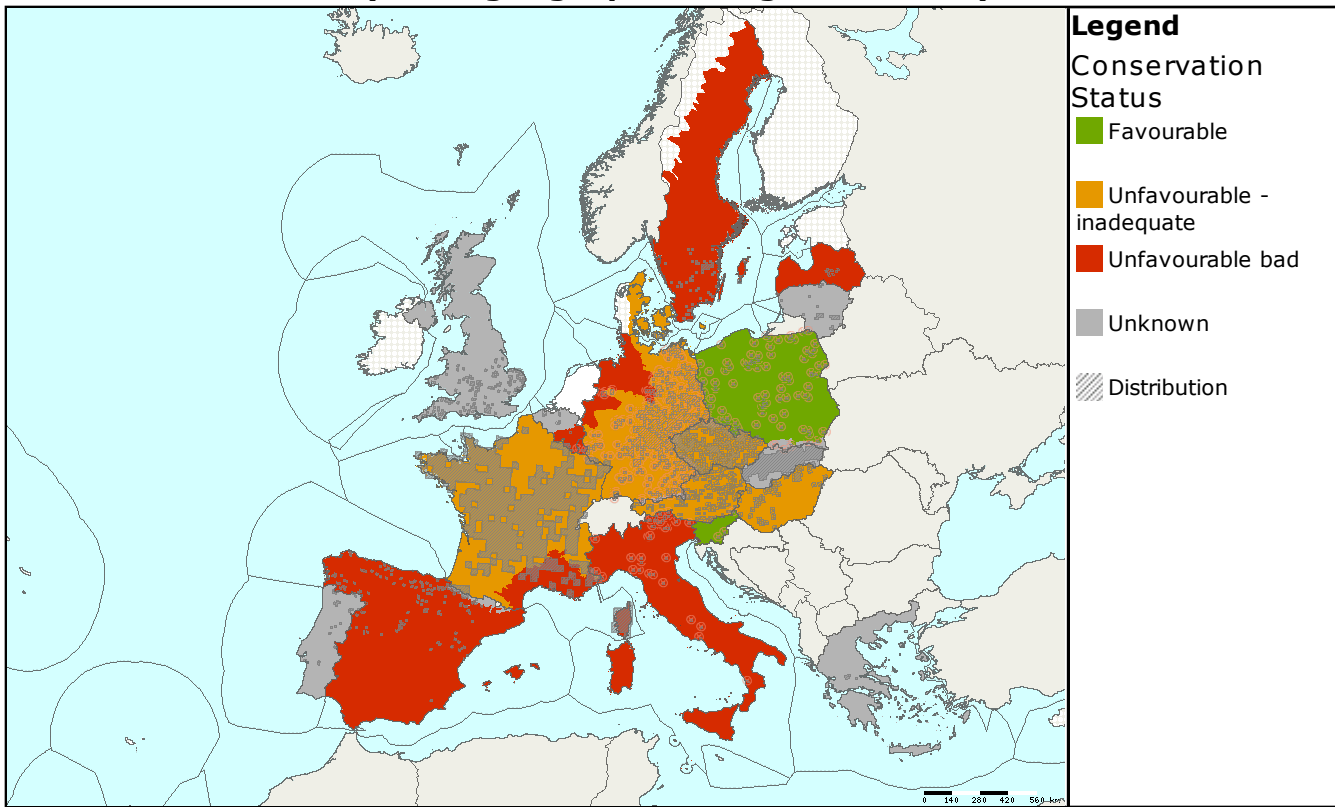

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						789 grids	
EU25	ATL						1790 grids	
EU25	BOR						96 grids	
EU25	CON						3140 grids	
EU25	MAC							X
EU25	MED						475 grids	
EU25	PAN						343 grids	

The barbastelle bat is widely but sparsely distributed across central and southern Europe, with its northern limit in southern England, south Sweden and Latvia. It was not reported by Ireland but may be present. It is associated with old woodlands and forests where it nests in cavities in old trees. Many countries reported individual parameters as 'unknown', and in some cases the overall assessment was 'unknown', showing a need for better information. The barbastelle has been assessed as 'vulnerable' in Europe by IUCN due to the decline in its population.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)
