

Species name: **Capra pyrenaica (except Capra pyrenaica pyrenaica)**
Annex: **V**

Species group: **Mammals**
Regions: **ATL MED**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

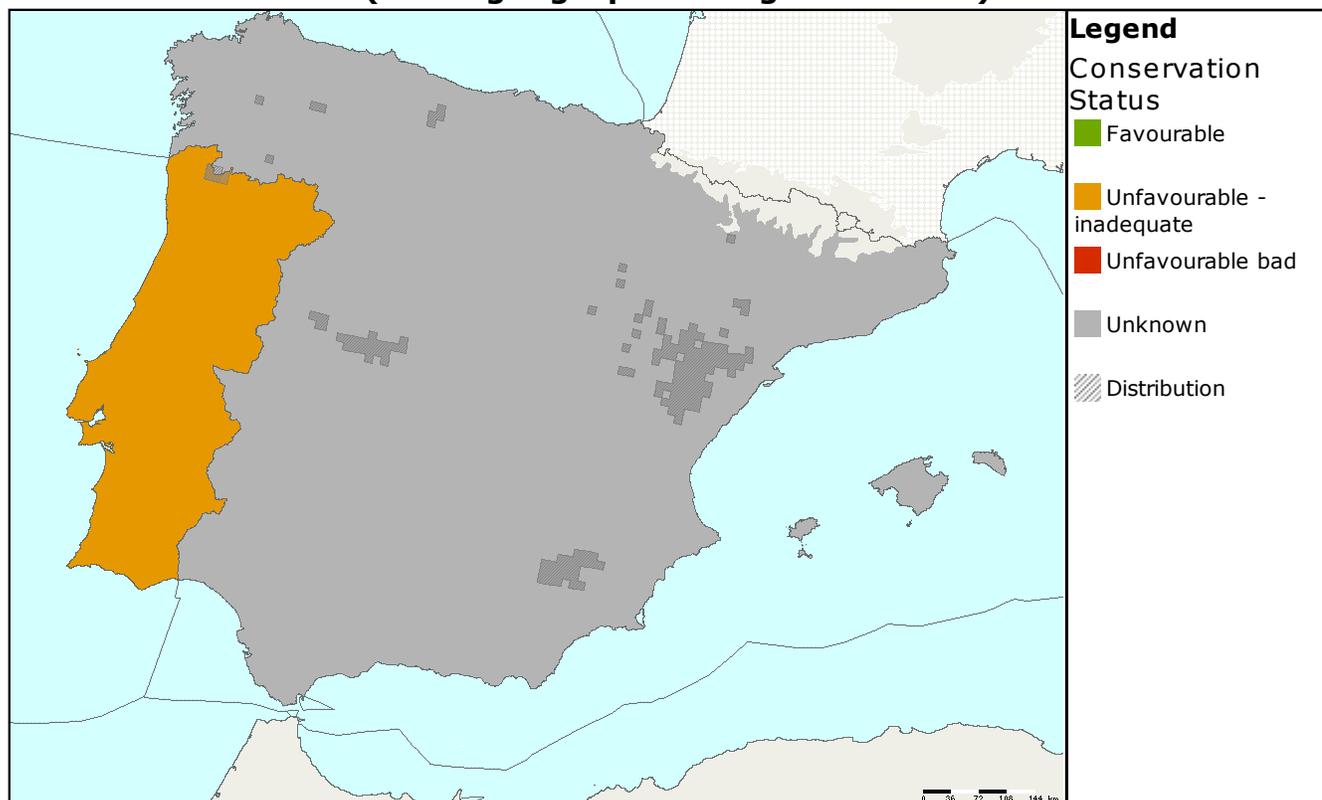

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ATL						12 grids	+
EU25	MED						8370 indiv.	

Iberian Wild Goat is endemic to the Iberian Peninsula. It was reintroduced in Portugal (Parque Nacional da Peneda-Gerês) in the 1990s, but its future is not ensured. It mainly occurs in the Spanish Mediterranean biogeographical region. Subspecies *C. p. pyrenaica*, endemic to the Spanish Pyrenees is assessed separately. It occurs in various types of rocky habitats but mostly on the cliffs and scree with scrub vegetation or open pine forest.

The conservation status in the Atlantic biogeographical region is 'unknown' but not 'favourable', because of the status of the populations in Portugal. The conservation status in the Mediterranean biogeographical region is 'unknown'. Since 1990s the population size is increasing, no major threats to the species were recorded. The species is evaluated as 'least concern' in European Mammal Assessment.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
ES	ATL						9 - (9) loc.	+	2
PT	ATL						18 - (18) indiv.	+	1
ES	MED						8300 - (8300) indiv.	X	
PT	MED						70 - (70) indiv.	+	1

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
