

Species name: **Lagenorhynchus albirostris** Species group: **Mammals**  
 Annex: **IV** Regions: **MATL**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

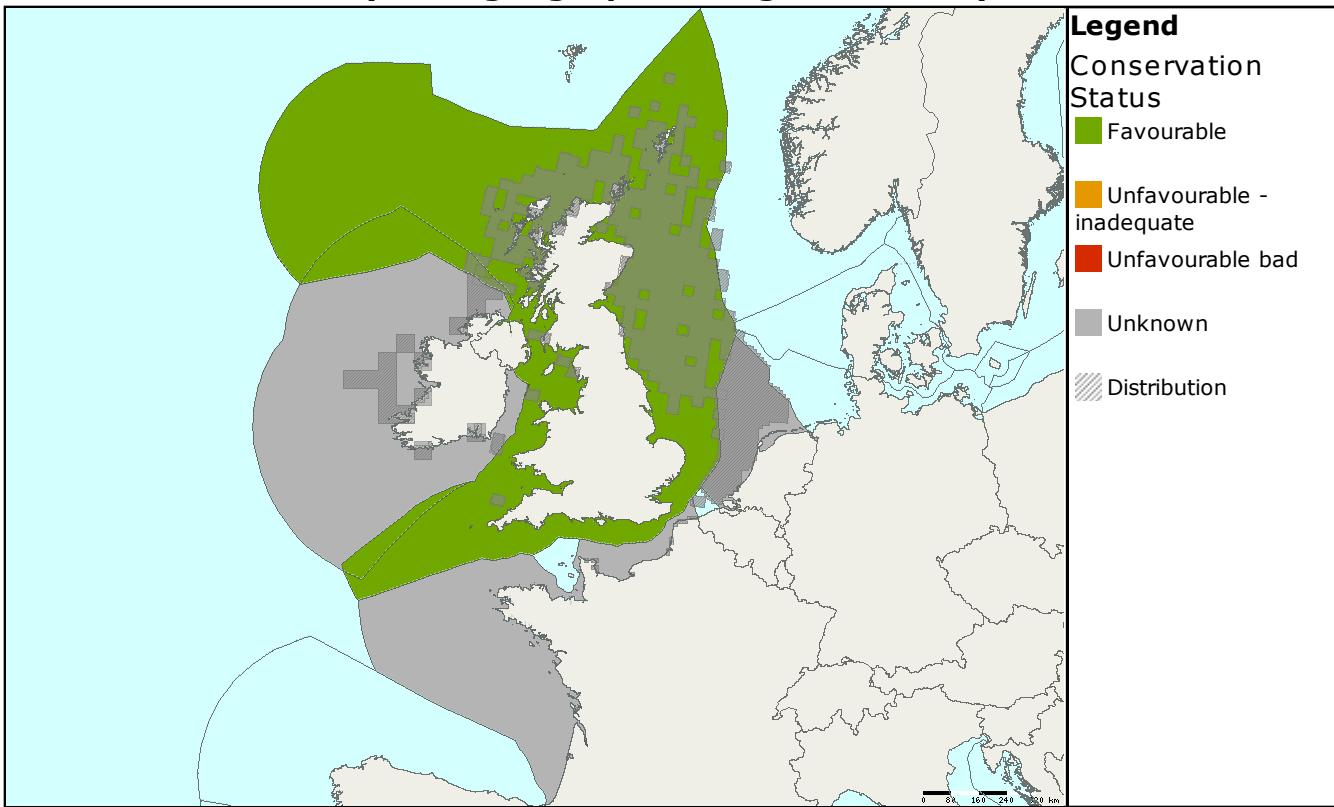

| MS   | Region | Conservation status assessment                                |  |  |  |  | Population size & unit | Population Trend   |
|------|--------|---|--|--|--|--|------------------------|--|
|      |        | Range   | Population   | Habitat  | Future prospects   | Overall  |                        |  |
| EU25 | MATL   | <span style="background-color: green; color: black;">█</span> | <span style="background-color: grey; color: black;">█</span> | <span style="background-color: grey; color: black;">█</span> | <span style="background-color: grey; color: black;">█</span> | <span style="background-color: grey; color: black;">█</span> | 23757 - 23907 indiv.   | <span style="background-color: grey; color: black;">█</span> |

The white-beaked dolphin inhabits the cold temperate to subpolar waters of the continental shelf areas of the marine Atlantic region from the United Kingdom, Denmark and Sweden and as far south as France. It is most abundant in the north to northwestern part of the North Sea to western Scotland and Ireland. The largest part of the declared population is distributed in the UK while no data was submitted by Denmark where the species however exists.

The overall assessment in the marine Atlantic region is 'unknown' due to the overall biogeographic conclusion for population, habitat and future prospects parameters. The species is believed to be abundant and widespread throughout its global range and is listed as a species of 'least concern' in the IUCN Red List of threatened species.

**Assessments of conservation status as reported by Member states  
(all biogeographical regions - EU25)**

| MS | Region | Conservation status assessment |            |         |                  |         | Size&unit            | Population trend | Data quality |
|----|--------|--------------------------------|------------|---------|------------------|---------|----------------------|------------------|--------------|
|    |        | Range                          | Population | Habitat | Future prospects | Overall |                      |                  |              |
| FR | MATL   |                                |            |         |                  |         | N/A indiv.           | X                |              |
| IE | MATL   |                                |            |         |                  |         | 1357 - 1357 indiv.   | X                | 1            |
| NL | MATL   |                                |            |         |                  |         | - 150 indiv.         | X                | 3            |
| UK | MATL   |                                |            |         |                  |         | 22400 - 22400 indiv. | =                | 1            |

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
