

Species name: **Steno bredanensis**  
Annex: **IV**

Species group: **Mammals**  
Regions: **MMAC MMED**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MMAC							X

The rough-toothed dolphin inhabits the tropical to subtropical deep oceanic waters of the Atlantic ocean. The species is declared as being occasional in the Portuguese marine Macaronesian waters. The overall marine Macaronesian assessment is ‘unknown’ and based on the Spanish data which report the species’ limited presence in the Canary islands. It is possible that this species should be considered an occasional species in Spanish Macaronesian waters unless otherwise proven differently in the future. The species is listed as ‘data deficient’ in the IUCN Red List of threatened species.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
ES	MMAC						N/A x	X	
PT	MMAC						N/A x	X	
IT	MMED						N/A x	X	3
MT	MMED						N/A x	X	3

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
