

Species name: ***Iris aphylla ssp. hungarica***
 Annex: **II, IV**

Species group: **Plants**
 Regions: **ALP PAN**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						19 loc.	=
EU25	PAN						67 grids	=

A ponto-pannonic plant species occurring within the EU in Slovakia, Hungary and Romania. It grows in xerophilous grasslands and open forests on calcareous and basic volcanic substrates.

The conservation status in both the Pannonian and the Alpine biogeographical region is 'unfavourable inadequate' which is connected mainly to the status of the habitat of species. The area of the habitat is decreasing and it is negatively affected by both human activities and biocenotic evolution.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
SK	ALP	Favourable	Unfavourable - inadequate	Unfavourable - inadequate	Unknown	Unfavourable - inadequate	19 - 19 loc.	=	3
HU	PAN	Favourable	Favourable	Unfavourable - inadequate	Favourable	Unfavourable - inadequate	13000 - 16000 x	=	1
SK	PAN	Favourable	Unfavourable - inadequate	Unfavourable - inadequate	Unknown	Unfavourable - inadequate	10 - 10 loc.	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
