

Species name: **Astragalus maritimus**
Annex: **II*, IV**

Species group: **Plants**
Regions: **MED**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED						150 - 400 indiv.	-

MED: The overall assessment is "unfavourable - inadequate", IT assessed range, population and future prospects in this category. Quite small population (150-400 ind.) and decreasing population trend reported. Species is endemic to IT – Sardinia where it has only one locality on a tiny islet called Isola di San Pietro.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
IT	MED						150 - 400 indiv.	-	1

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
