

Species name: **Campanula zoysii**
Annex: **II, IV**

Species group: **Plants**
Regions: **ALP**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						108 loc.	=

The Zois bellflower is endemic to the mountains of Slovenia and Italy and lives in limestone crevices of the high-mountain belt of the Julian and Kamnik Alps. It probably belongs to a group of ancient plants dating as far back as the Tertiary period. Both Slovenia and Italy report all parameters as 'favourable', although Slovenia reports some anthropogenic as well as natural threats.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
IT	ALP						8 - 8 loc.	=	2
SI	ALP						100 - (100) loc.	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
