Assessments of conservation status at the European level (all biogeographical regions - EU25)

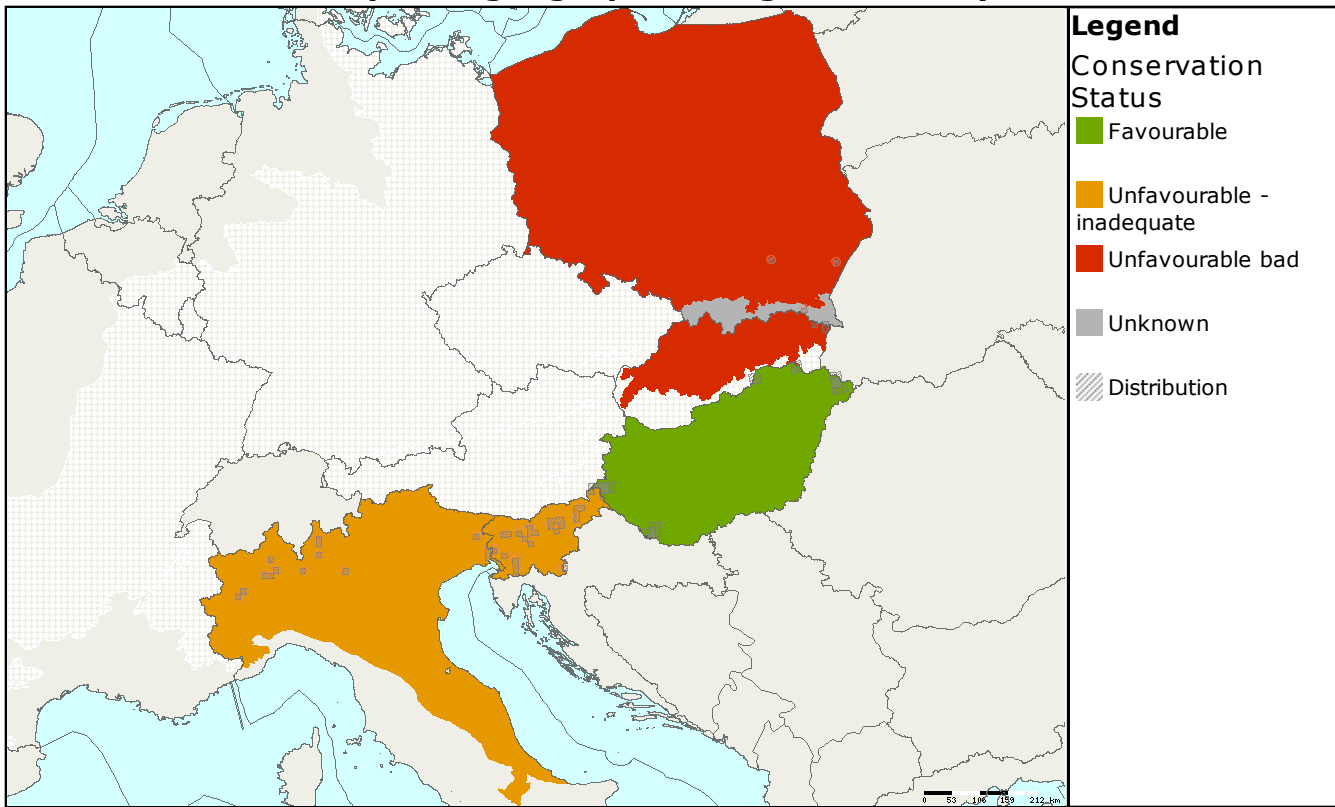

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						27 grids	-
EU25	CON						37 grids	-
EU25	PAN						10000 - 20000 indiv.	+

Eleocharis carniolica is a plant species present in the Alps and the Eastern Carpathians. Threatened mostly by species competition, forest management, pollution, drainage and pillage.

Overall conclusions for Alpine and Continental regions are 'unfavourable-inadequate'. It is based mainly on reports from Italy and Slovenia where species is mostly present. From Pannonian region reported parameters from Hungary are all 'favourable' leading to the same regional assessment.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
IT	ALP	Unfavourable - inadequate	Unfavourable - inadequate	Unknown	Unfavourable - inadequate	Unfavourable - inadequate	3 - 3 loc.	=	2
