

Species name: **Limonium dendroides**
Annex: **II, IV**

Species group: **Plants**
Regions: **MAC**

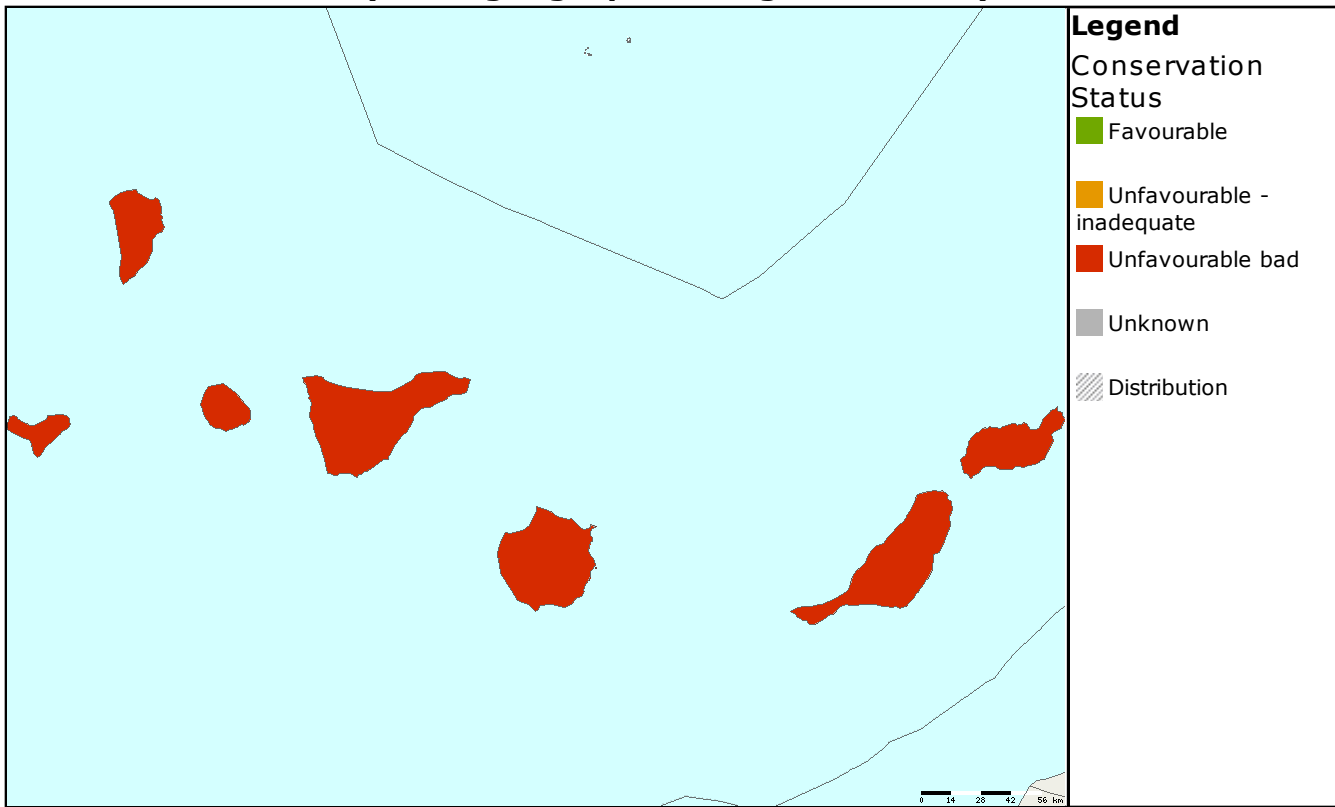

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MAC						39 indiv.	-

MAC: Endemic to Gomera, Spain where it is found scattered across the southern part of the island. No maps provided by Spain. 'Unfavourable-bad' for all parameters except habitat which is reported as 'unknown'. Population dynamics are poor, partly due to self incompatibility coupled with the fragmented and small population. 'CR' in Spanish RDB. See http://www.mma.es/portal/secciones/biodiversidad/inventarios/inb/flora_vascular/pdf/991.pdf

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
ES	MAC						39 - (39) indiv.	-	1

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
