

Species name: **Petalophyllum ralfsii**  
Annex: **II**

Species group: **Plants**  
Regions: **ATL MED**

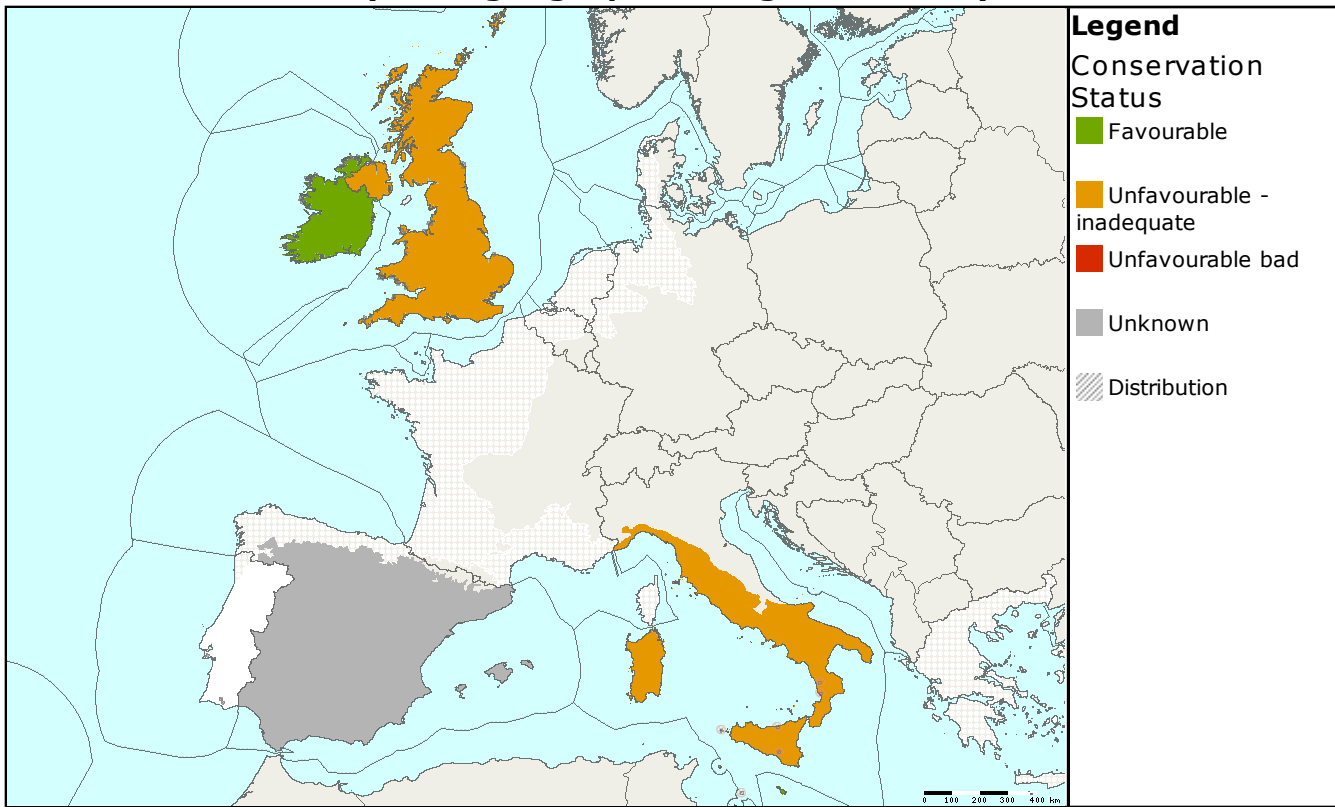

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ATL						53 grids	=
EU25	MED							

*Petalophyllum ralfsii* is a liverwort growing mostly in calcareous dune slacks in sand dunes. Its status of conservation is "impossible to be assessed" for the Mediterranean region. For the Atlantic region the overall assessment is "unfavourable-inadequate", despite many individual parameters are reported as "favourable". All parameters reported by Spain are "unknown".

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
IE	ATL						29 - 29 loc.	=	1
UK	ATL						666000 - (666000) x	=	2
ES	MED						N/A x	N/A	
IT	MED						7 - 7 loc.	=	2
MT	MED						N/A x	=	3
PT	MED						N/A x	=	

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
