

Species name: **Petrocoptis grandiflora**
Annex: **II, IV**

Species group: **Plants**
Regions: **ATL MED**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ATL						1 - 3 loc.	=
EU25	MED						9 - 11 loc.	

A plant species endemic to a small area in western Bierzo in north-western Spain. It occurs on dolomite and calcareous cliffs and outcrops of rock.

The conservation status in both the Atlantic and the Mediterranean biogeographical regions is 'unknown'. The species geographical distribution is limited and it persists in small isolated population, which represents a major threat. The reports for this in general poorly known species provided by Spain are incomplete. Better information is required to allow assessment of conservation status.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
ES	ATL						1 - 3 loc.	=	1
ES	MED						9 - 11 loc.	N/A	1

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
