

Species name: **Physoplexis comosa**
Annex: **IV**

Species group: **Plants**
Regions: **ALP**

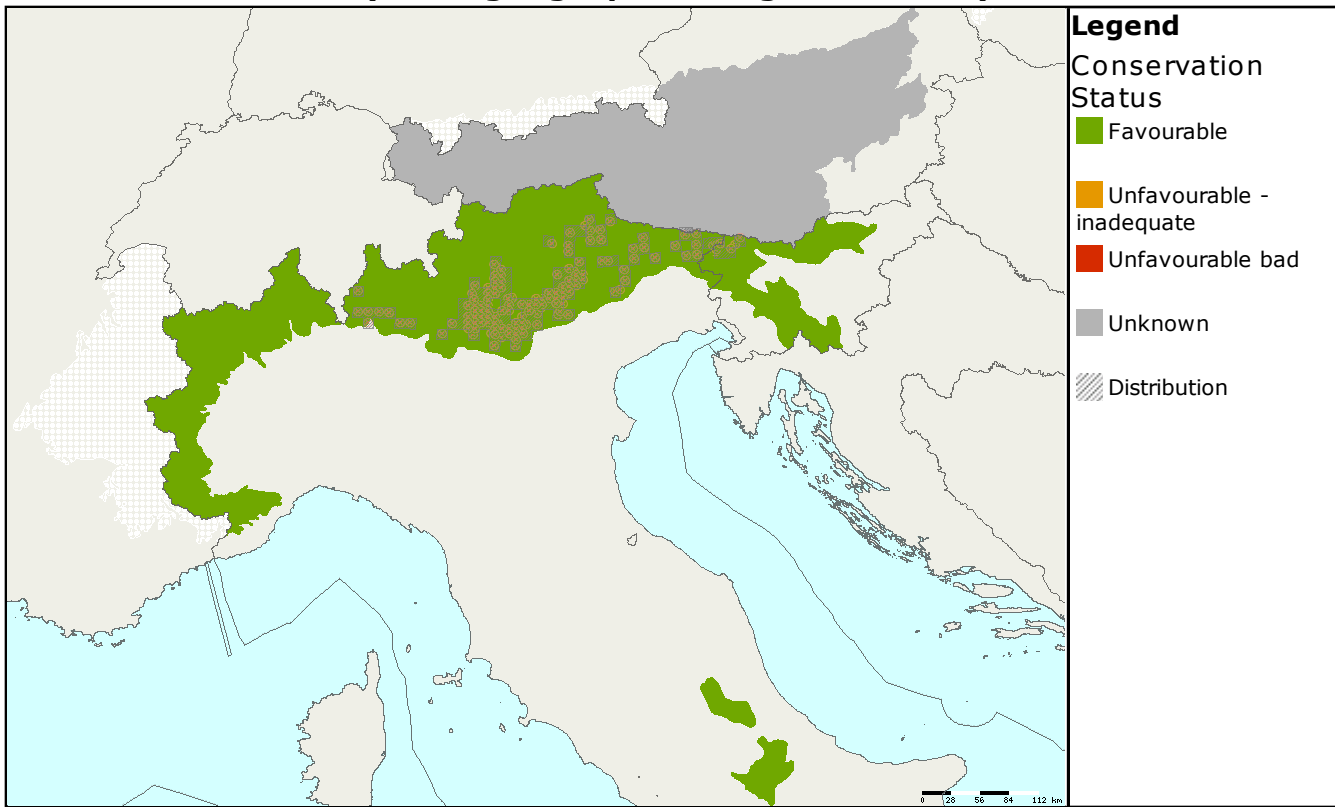

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						96 grids	

Physoplexis comosa is a flowering plant distributed in the Alps. Huge majority of localities are reported from Italy. Austria reports the scarcest information (population and future prospects) while in Italy only the habitat parameter is 'unknown'. Despite these gaps, the overall conclusion is 'favourable' mainly due to Italian populations.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
AT	ALP	■	■	■	■	■	5 - 50 indiv.	X	3
IT	ALP	■	■	■	■	■	160 - 160 loc.	=	2
SI	ALP	■	■	■	■	■	2 - (2) x	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
